6.5.0.1 Release Notes

Prepared - 9/22/10 2:32 PM

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
219717	Feature Enhancement	N/A	API & CLI	Extended the api get_attachment and the corresponding evdownload CLI command to retrieve attachments stored on the file system	This enhancement allows the retrieval of attachments stored on the file system, as opposed to those stored in the database, via the API and CLI.
221469	Feature Enhancement	N/A	API & CLI	Extended evdownload command to allow downloading of all attachments for an issue or set of issues	New options have been added to the CLI evdownload command to allow all attachments to a single or multiple issues to be downloaded at one time.
219700	Product Bug	6.5	Add & Edit	Edit screen shifted and rendered to the right when Status is changed	This was an obscure rendering issue that occured on an Ajax refresh. This was only a cosmetic issue and has been resolved.
219701	Product Bug	6.5	Attachments	Attachment drag-and-drop applet caused JavaScript error	This only occured when the attachment description was not required and not supplied by the user. Very few customers used this combination, but the problem has been fixed.
219748	Product Bug	6.4.1.3	Layout Rendering	Tab order sequence did not work correctly on all repeating row layouts	Within repeating row layouts that had empty cells with no field, the tab order sequence did not work correctly. This was fixed.
219711	Product Bug	6.5	Relationships	Some related issue displays appeared blank in IE7 and IE6 browsers	This only happened on some related issue displays. The problem was related to a browser bug. This has been fixed by working around the browser problem.
217020	Product Bug	6.4.1.2	Rules Engine	Refresh rules cleared other values when setting a user field	This was a rendering problem that was fixed.
219658	Product Bug	6.5	Search / Report	Reports output through the Report Scheduler ignored alt_titles at the child level of hierarchical reports	This was a bug that was fixed
221522	Product Bug	6.3.1.2	Web Services	Web service calls required the user ID and password in the properties file to work correctly	This restriction has been removed.
