ExtraView 11.0
Key New Features

Workflow

- **The history audit trail of issues now includes all information about changes to attachments, including access to deleted attachments**

- **Improved presentation of saved outgoing emails in a format similar to Outlook**

- **Other improvements to outgoing emails include options to set the "from" and "reply-to" addresses driven by logic within the issue**

- **Several performance improvements, especially when handling large lists with thousands of entries and with handling large allowed value combinations**

Extra*View*

Workspaces

- **New functionality for administrators to control the creation and management of public workspaces**

- **Default workspaces may be set by the administrator or user within user administration**

Extra*View*

Reports

- **Additional metadata about reports can be displayed with a single button click**

- **Extensive improvements to the saving of reports. In addition to the normal security permissions:**
  - Public reports may be made visible and editable to a specific list of users
  - Public reports may be made visible and editable to specific user groups
  - Public reports may be made visible and editable to specific user roles

- **There is now user, user group and user role control over documents added to the document repository. This gives granular access to control which users may access specific documents/reports stored in the repository**

- **Control over the displayed width of individual columns on the output of column, matrix and summary reports**

Your Process. Your Workflow.

Reports (continued)

- **New options to add runtime information such as Report and Container ID's to Container report output**

- **Header and footer information may now be placed on the output of Container reports**

- **Report hierarchy filters may now utilize the *union*, *intersect* and *minus* conjunctions**

- **New option in report editors to control how repeating information is displayed**

Extra*View*

Mobile Clients

- **New option to configure a Home Page report, so the user automatically sees a report when they sign on or navigate to the Home Page**

- **New configuration option to allow a user to enter a real signature when adding / updating an issue**

ExtraView

Administration

- **New filter options for layout cell attributes to enhance the display of related issues**

- **Further enhancements for an administrator to manage scheduled reports**

- **New options to export additional user information to spreadsheets for audit purposes**

- **Allowed values may now be configured with up to 5 parent fields**

- **Vastly improved performance of the importing of records**

- **Improved metadata migration, with options to ignore specific field values which should not be migrated**

ExtraView

Integrations

- **Real time address verification, including the automatic addition of geospatial coordinates to the validated addresses**
