

ExtraView 21.0

Key New Features

This document is provided to ExtraView's customers under non-disclosure and for information purposes only. Its contents must not be shared with third parties without the permission of ExtraView Corporation.

General Feature Improvements

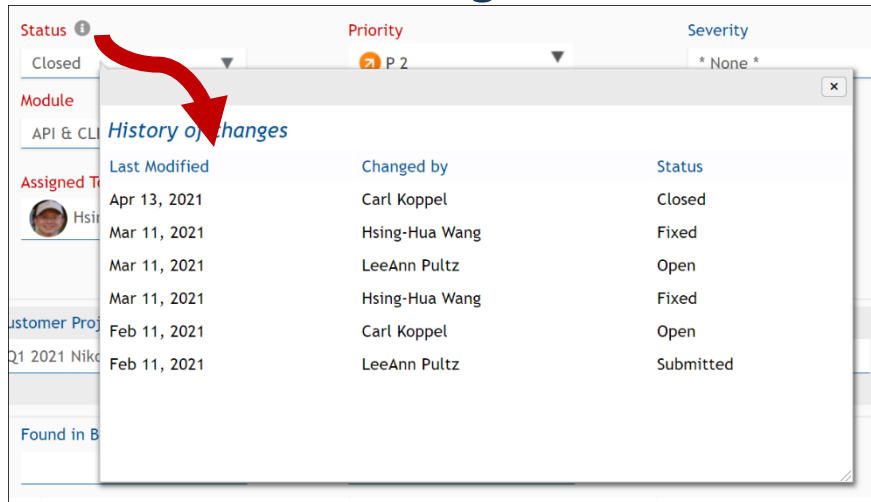

- Most pages may now be bookmarked for future reference, or the page addresses (URL's) may be copied to the local clipboard and then pasted into other applications. For example, URL's may be shared with other users via email
- Users may now see their password in clear text that they entered on the sign on screen

Workflow

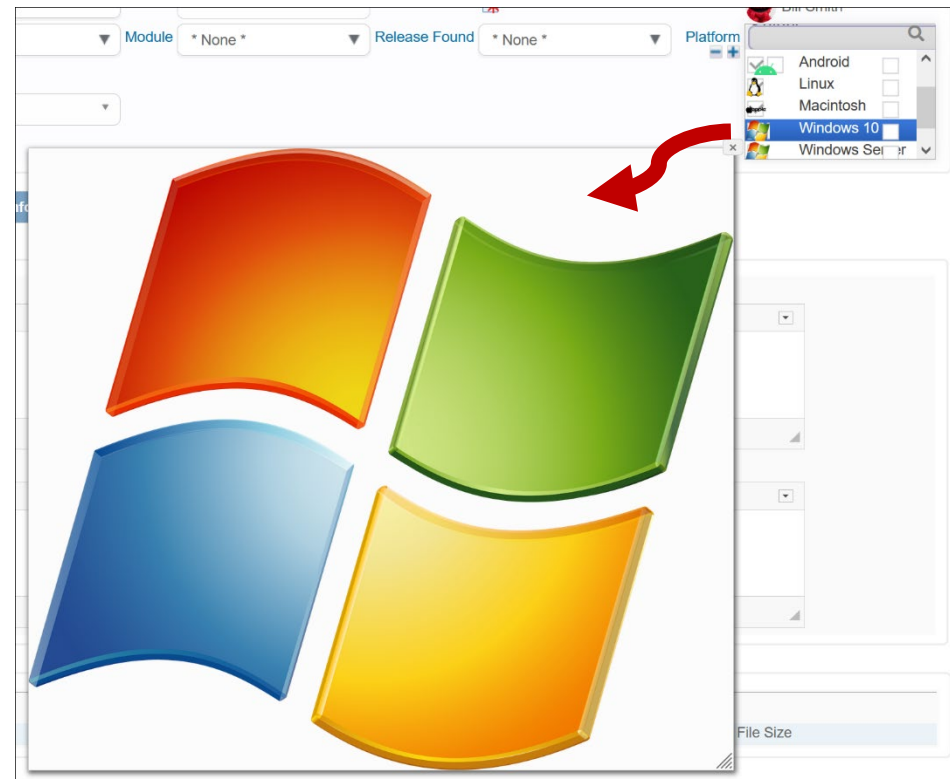

- Reports may be embedded within *add* and *edit* screens. Ability to use field values from the screen passed into the report as filters
- Each field on the Edit screen has a new icon which appears with a mouseover event. When clicked, this displays a context menu
- The context menu initially has two options – to display history for that field and for users with administrative privileges an option to display information about the current layout or embedded layout
- The context menu's appearance may be controlled for each layout and each field independently
- List fields which contain images have a new option that allows the end user to click on the thumbnail image and expand it to a larger size. This is also supported on mobile clients
- The administrator may now place a Close button on *add* issue screens. This exits the screen without inserting the issue

Workflow Features

Field-level History – click on any field to see its changes

Optionally enlarge thumbnail images within list fields

Mobile

- New ability to mass update issues from the mobile clients
- “Pinch to Zoom” is enabled on iOS mobile clients
- List image thumbnail values can be expanded to the screen size
- Improved searching for users on *add* and *edit* screens, in a similar manner to the desktop
- The row and column titles on reports are fixed in position to make it easier to see large report output

Test Plan Details

Issue # 10994 **Date Created** 3/23/20 1:04 PM **Last Modified** 3/23/20 1:04 PM
Test Plan Name Enterprise Build for March release **Product** Tracker **Product Version** 2.0
Title
 This is the test plan for Version 2.0 Build 32
Description
 This is the comprehensive test plan for the March Release. All Test cases must be executed and approved before release of the new...
Plan Completed
 No Yes

Test Cases & Results

Issue #	Case Status	Title	Status
10816	New	Test 8-25 Test 8-26 test case	
10819			Tested - Failed Failure
10760	Live	Test 8-20 Test 8-20 test case	
10817			Tested - Failed failure
10814			Tested - Passed test passed
10706	Live	Add Business Calendar	
10722			Tested - Failed
10721			Tested - Passed
10720			Tested - Passed
10685	Live	Add Report Folders	
10738			Tested - Passed This test is a pass
10729			Tested - Failed still problems
10728			Tested - Passed

Customer

Issue # 11004 **Date Created** 2/17/21 1:51 PM **Last Modified** 7/2/21 1:58 PM
Customer Name Bank of Monopoly **Contract Number**
Street Address 2700 5th Avenue **Phone Number** (203) 461-4878 **Fax Number**
City MANHATTAN
State New York
Zip Code 10111
Country United States of America

Reporting

- New report type to report on historic values of any fields within issues
- The filter user interface has been enhanced to clarify complex filters which are comprised of multiple and / or conditions
- Reports may be embedded within standard notification layouts and within ad hoc email notifications. Reports may also be attached as a file to these notifications
- Conditional formatting on fields can be applied, based upon when a field changed its value
- The overall height of text fields within report output can be set, and the user can expand and contract height of the field
- The owner of any scheduled report may be transferred to a new user

396529	Jun 30, 2021	Fixed	 P 2	 Hsing-Hua Wang

Count: 5 rows

Administration

- If a task goes into an error state or stops, there is a new option to notify an administrator
- The styling and keystrokes to manipulate the inline editor on the Behavior Setting screen have been improved
- When a user is disabled, all sessions belonging to that user are disabled immediately
- Improved layout management with additional onscreen information and the ability to drill into embedded layouts and directly edit these from within a parent layout

API & Integrations

- There is a new API option to insert images directly into HTML Area fields via the API
