ExtraView 8.1
Key New Features

Administration

- New paging logic to manage large sets of user accounts, simplifying access when there are hundreds or thousands of users
- Administrators must now have permission to view and/or update a field before it will appear to them in the data dictionary, or list management utilities
- New feature to allow end users to discover their User ID and to reset their password if they have forgotten these
- The File Import utility now supports the uploading of file attachments
- Following the validation of uploaded files with issues, a spreadsheet may be downloaded, containing all the errors
- Enhancements to LDAP integrations, with a properties file to control the process
- Simpler Quickfind administration and setup – all on one screen
- New context-sensitive help accessible from all admin screens
- New, "flat grey" and "flat blue" color schemes

ExtraView

Workflow

- **New configuration option to allow *add* and *edit* screens to be paginated, allowing complex or large workflows to be broken down into discrete steps**

- **Optional context-sensitive help available on all screens**

ExtraView

Reporting

- **MySQL databases now support the *intersect* and *minus* query conjunctions**

- **Mass update operation from a report can now have a configurable set of fields on the display**

- **Dashboard reports now support Custom URL reports**

- **Hierarchical reports may now display parent records that do not have any children**

- **Calendar reports with runtime filters may have the filters changed by the user after running the report**

- **Hover text layouts may now be placed on Edit buttons**

ExtraView

API & CLI

- **New *get_projects* CLI function**

ExtraView

User Custom Programming

- **New exit to allow uploaded attachments to be scanned for potential vulnerabilities**

ExtraView

System-level Enhancements

- **New version of the MySQL Connector/J driver**

- **Options within the Configuration.properties file may now be encrypted**

ExtraView

Integrations

- **Salesforce API has been updated to use the Salesforce 29.0 version**
