ExtraView 10.0.2 Release Notes
Fixed Bugs

Issue #	Found in Release	Module	Title	Release Note
324722	10.0.2	Add & Edit	Tabbing through fields on an add / edit screen did not stop at the new style "box" radio buttons	This was omitted within the original implementation, and has now been fixed.
319266	9.0.3	Administration	Password rules were not enforced during the reset of a user's password	When an administrator expires a user's password, the user must create a new password upon their next access to the site. Under these circumstances, although a new password was mandatory, the new password was not being validated by the rules set in the behavior setting named PASSWORD_RULES. This has been fixed.
322781	10.0	Search / Report	Hierarchy Report - checking box "show parents without children" caused an error	When running a hierarchical report that checked the "Include parents without children" option, an error was generated, causing the report to not run. This has been fixed.
