

Release Notes for ExtraView 10.2

Date: June 21, 2016

ExtraView 10.2 Release Notes
Feature Enhancements

Issue #	Module	Title	Release Note
323969	Administration	New user custom exit that controls email notification upon user self registration	A new user custom exit has been created, named ucSelfRegistrationEmailList. This allows the developer to control the email recipient list when a user self-registers.
326337	Administration	Report ID and Date Created have been added to the Report Scheduler Admin Screen	Simple improvement to improve usability of the screen
327062	Attachments	Preventing the permanent deletion of file attachments	This new feature introduces a new behavior setting named ATTACHMENT_PERMANENT_DELETE. This may have the value of YES or NO. When set to NO, the file attachments are never deleted permanently from the server when the user deletes them, but are still retained for viewing via the History screen of each issue.
327313	Relationships	Paging logic can now be applied to related issue displays	With the use of a new behavior setting named RID_PAGING_DEFAULTS, page sizes for related issue displays can be set on a global basis. Within an individual layout, you can apply a layout cell attributes of RID PAGE SIZE and RID THRESHOLD to override the default values. Navigation arrows are placed at the bottom of the related issue display when required, and there is also the ability to jump to any page in the list.
320581	Search / Report	New ability to add filters at a level in a hierarchy on a column report, without selecting any columns from that level	Previously, it was mandatory to select at least one column from each level within a hierarchy report. This restriction has been eliminated and displaying columns at all levels are now optional. This allows the user to filter on any level in the hierarchy without displaying data for that level.
324429	Search / Report	Configuration of accordion folds on Detailed Report layouts	FOLD_PRE_xxx and FOLD_POST_xxx fields may be placed on detailed reports. They are initialized in the open state and may be closed by the user.
325766	Search / Report	Reworked report editor screens	The report editor screens have been reworked to group all filter information together, following the field selection information. This improves the usability of all report editor screens.
326039	Search / Report	Metric columns on Summary Reports can be sorted, matching Matrix Reports	This provides summary reports with the same sorting options as matrix reports.
326447	Search / Report	Resorting of individual fields on x-axis of matrix report	This is now supported, when there is a single field on the X axis.
326956	Search / Report	Fixing the width of columns on report output	Column reports, matrix reports and summary reports all have a new option, to be able to fix the width of one or more specific columns on the output. The Field Width setting is accessed by right-clicking the red button on a selected field, and entering the number of characters to use

Feature Enhancements

Issue #	Module	Title	Release Note
			to set the width of the column.
326880	XML Import and Export	List value handling and XML Export / Import	There are some scenarios where data in the form of list values should not be migrated from one instance to another via the XML Export / Import process. For example, test data created with the OBJECT Business Rule creates list values which you might not want to migrate. To handle this, there is a new parameter on the OBJECT rule - DO_NOT_MIGRATE=TRUE. There is also a means to flag list values within the UDF list management utility so that they are not migrated.

ExtraView 10.2 Release Notes
Fixed Bugs

Issue #	Found in Release	Module	Title	Release Note
325295	10.1	API & CLI	Attachment file description was not being added to the database through the API	This was a minor bug which was fixed.
327314	10.1	Add & Edit	Attaching files with Cyrillic description caused incorrect rendering of the File Description	Cyrillic characters were not handled correctly with the description field on attachments. This has been corrected.
318792	9.0.2	Search / Report	Report issue -- Plain Excel reports have problems with large outputs	Reports being generated to Microsoft Excel output, with more than 32k rows failed. This has been fixed to allow an unlimited number of rows being output.
327747	9.0.3	Search / Report	Hierarchical report error	In version 9.0.3, a hierarchical report was found to produce different results when run within the administrator role, and within a user's role. Custom security was in force within the installation. The problem was found to be within the way in which custom security was applied to the query. This has been fixed.
