Release Notes for ExtraView 11.0.3

Date: December 22, 2016

Module: Add & Edit

Issue #	Title	Release Note
337053	The maximize button on the toolbar of HTML Area fields is now enabled within modal popup windows	This is a minor improvement to HTML Area fields, allowing users to expand the size of the HTML Area editor to the size of the window when the Maximize button is clicked.
		Count: 1 rows

Module: Attachments

Issue #	Title	Release Note
335119	New ATTACHMENT_SAVE button that can be placed on ATTACHMENT layouts	This new button may only be placed on ATTACHMENT layouts. The intent is to allow a user to save an attachment to their local file system. Different browsers have different functionality here, beyond the control of ExtraView and the documentation should be consulted on the specific behavior of this button with different browsers.
		Count: 1 rows

Module: Design Center

Issue #	Title	Release Note
337773	add ability to search by layout id in design center	Within the design center, the Layout ID is now a searchable field.
		Count: 1 rows

Module: EV - EV Integration Daemon

Issue #	Title	Release Note
334367	Set repeating row sort order on import using the ExtraView - ExtraView integration daemon	This improvement now ensures that the order of repeating rows within a record is preserved when an issue is migrated from one server to another server using the ExtraView - ExtraView integration daemon.
		Count: 1 rows

Module: LDAP

Issue #	Title	Release Note
235001	Merging user information within ExtraView with LDAP results when performing queries	When connected to an LDAP server, and performing queries, we no longer query the LDAP server, but rely solely on information held within the ExtraView database. This leads to performance improvements.

	Count: 1 rows

Module: Notification

Issue #	Title	Release Note
335769	Move position of "Select Template" field in ad hoc email template	The position of the "Select Template" list in the ad hoc email template has been moved to the top of the form. It is more logical to choose a template before completing the remainder of the form.

	Count: 1 rows

Module: Search / Report

Issue #	Title	Release Note
334443	New report option to enable keyword searching directly from the report output	There is now an option for Column reports, Matrix reports, Summary reports and Quicklists, to include a keyword search box on the report output. When the user enters a search term or terms within the search box, the term or terms are added to the filters for the current report output, and the report is immediately regenerated with the new result set.

	Count: 1 rows

Module: Workspace GUI

Issue #	Title	Release Note
334441	New workspace option to open new panels without a vertical offset	This is a new personal option for workspaces for users who prefer to open all new workspace panels at the top of the screen, and not to have their new panels opened to the right and down from the previous panel that was opened.

	Count: 1 rows

Module: XML Import and Export

Issue #	Title	Release Note
336631	XML Export may now exclude user workspaces	User's workspaces are now treated the same as user's reports when performing XML Exports from an installation. This allows users to retain their settings (as well as their current reports) when a metadata import is made to a production environment
335637	Minimize user profile checkbox within XML metadata export - modification	If the user profile information is included in the XML export definition, and the user profile does not exist in the target system the profile is created as before.

		If the user profile is included in the XML export definition, and the user profile does exist in the target system, and the "Minimize User Information" checkbox was checked on the Export phase, no update is made to the target profile. This including roles, privacy groups, user attributes, user groups, and user User Defined Fields
		Count: 2 rows
		Total Count: 10 rows

Module: API & CLI

Issue #	Found in Release	Title	Release Note
337696	11.0.3	Accented characters were not passed correctly via an API call to ExtraView	Accented characters placed in an API call that were not escaped correctly were not rendered correctly. Now, accented and double-byte characters are handled correctly throughout API calls, assuming they are escaped correctly within the API string.
337065	11.0	The add_attachment API call did not display its template response	After a successful API call to the add_attachment command, should have returned its response template HTML file. This was not working and has been fixed.
			Count: 2 rows

Module: Add & Edit

Issue #	Found in Release	Title	Release Note
336975	11.0.3	Scrollbars occasionally appeared within a Related Issue Display when displayed on an Add or Edit screen in Firefox browsers	This was a cosmetic issue that only affected some users in Firefox browsers. The problem has been rectified.
334928	11.0.2	Extremely large edit layouts sometimes had excessive and unexpected vertical scrolling	This was caused by the edit screen finding focus on a suitable field after an Ajax call. If the Ajax call resulted in a significant difference to the display, then it was possible that the field found on which to focus was not on the same area of the screen in which the user had been working. The logic has been altered to fix the position of the viewport into the screen at the same point before and after an Ajax call, thereby minimizing or eliminating any scrolling of the screen
334393	11.0	Session was not terminated when logging in automatically and closing browser	There is a new parameter to API calls named ev_signoff. When the behavior setting named AUTO_SIGNOFF_ON_USER_EXIT is set to YES and this parameter is added to API calls, then the user's session is terminated after completion of the API command.
			Count: 3 rows

Module: Administration

Issue #	Found in Release	Title	Release Note
337299	11.0.1	Thousands separator attribute did not update for numeric expression fields in the data dictionary	This has been fixed.
335786	11.0.2	Editing the Hover Help Layout Element Attribute threw a Java exception	This occurred because the layout cell attribute referred to fields that had been deleted from the data dictionary. The code now handles deleted fields correctly and automatically removes them from the Hover Help on a field

			Count: 2 rows

Module: Allowed Values

Issue #	Found in Release	Title	Release Note
332915	10.2	Allowed value problem when the parent is on one embedded add/edit layout and the child is on a different embedded add/edit layout	Allowed values were not rendering correctly in this configuration. The problem has been resolved.
			Count: 1 rows

Module: BatchMail

Issue #	Found in Release	Title	Release Note
337068	11.0.3	Minor change to the processing of email notifications	The BatchMail task expects to see "____" as the led in characters to emails for processing while the notification processes within ExtraView were generating "__". This led to some email notifications not being cleaned up correctly after processing. This has been fixed.
			Count: 1 rows

Module: Design Center

Issue #	Found in Release	Title	Release Note
335904	11.0.1	The application server would hang when trying to modify layouts and the user was in the Russian locale	This only happened within Microsoft SQL server environments. The SQL has been modified to circumvent the problem.
			Count: 1 rows

Module: History

Issue #	Found in Release	Title	Release Note
336636	11.0.1	Record History page loads slowly in Development & Test compare to current production environment	The History audit trail was occasionally slow in a small number of sites. The problem has been addressed by adding an additional index to the history table within the database.
			Count: 1 rows

Module: Mass Update

Issue #	Found in Release	Title	Release Note
336071	11.0.1	Mass update of certain built-in fields was not working	This problem was traced to inbuilt fields, when they were placed on

			embedded layouts within add and edit screens. This has been fixed.
			Count: 1 rows

Module: Mobile Server

Issue #	Found in Release	Title	Release Note
337529	11.0.3	Android keyboard would sometimes cover input fields on a form	This happened with input fields on add/edit forms, at the lower half of the screen. It would be difficult to get focus on these fields to then perform input. This has been fixed so that it is straightforward for the user to scroll up and down the visible part of the screen, with the keyboard remaining at the bottom.
			Count: 1 rows

Module: Notification

Issue #	Found in Release	Title	Release Note
336634	11.0.1	Log area fields in email notifications generated with an email template displayed an X image	The X images indicated a missing image on the output. The images were actually placeholders for the sort icons when the log area field was displayed on add/edit screens. The images are not functional on email notifications and have been removed from the email.
			Count: 1 rows

Module: Quickfind

Issue #	Found in Release	Title	Release Note
335861	11.0.2	Quickfind occasionally caused locking errors resulting in null pointersin the app server log	This occasionally happened when many users were updating issues simultaneously. The locking logic has been altered to circumvent the problem.
335797	11.0.2	Quickfind indexing problem with some Microsoft Word documents	This error occurred when a Microsoft Word using Microsoft Word 2007 or greater was saved using the old .doc file extension, as opposed to the correct .docx extension. The indexer could not recognize the document and presented an error in the log. This has now been adjusted to look at the specific mime type of the document, not just the file extension.
			Count: 2 rows

Module: Relationships

Fixed Bugs

Issue #	Found in Release	Title	Release Note
337809	11.0.3	Error removing related issues	Errors were observed on a site when users attempted to use the Remove checkbox within a related issue display, in order to remove related items from the relationship. This has been fixed.
			Count: 1 rows

Module: Search / Report			
Issue #	Found in Release	Title	Release Note
337784	11.0	Managing the Shared reports folder	The long-term objective is to deprecate the Shared reports folder, and simply have reports appear to users as public reports if they were shared to them. At this time, it will no longer be possible to create new folders within Shared reports.
337496	11.0.2	The order of the months on the X-axis of a Matrix Report is incorrect when records have a time close to midnight, and are at the start of one of the time periods	The SQL that handled time zone conversions was not completely accurate. This has been fixed to correctly translate the times at the boundaries of months.
337476	11.0.2	Recursive report folder problem impacted site performance	A user was able to save a report folder inside itself causing a recursive relationship. The root cause of this problem was not found after extensive testing and code review, so a check was introduced into the code to prevent this situation happening in the future.
337324	11.0.1	Date fields were display in different formats within plain Excel and formatted Excel output	This was a minor issue that was corrected so that both methods of Excel output now with the same formatted, that of the user's date format set within their personal options.
337323	7.0.14	Hierarchical report was not correctly showing parents without children on the output	This is a change to the specification of this feature. Previously, when selecting the option within a reporting hierarchy, to only show parents without children, the parent issues were required to be members of a relationship. Now, any issue that does not have children will be displayed, irrespective of whether the issue has children. The key fact in determining the output of the record are the filters placed at the base level of the hierarchy.
336866	11.0.1	Output to Formatted Excel - display the background color to sub-total rows and columns	This is a cosmetic fix that makes the background colors of cells output to Microsoft Excel (formatted output) consistent with the browser output.
335949	11.0.2	Could not add new user groups from the Report screen	The Add and Delete buttons were inadvertently omitted when a change was made to the popup in 11.0.2.
334295	11.0.1	Report filters were changed automatically and incorrectly when editing a report	This problem was recognized on a Custom URL report and when allowed values were used in the filters and the same field was used in multiple filters. This has been fixed.
333719	11.0	Hover help was not picking up the correct fields after metadata migrations	Hover help layouts were not handled correctly in the metadata migration. This has been fixed.

			Count: 9 rows

Module: Workspace GUI

Issue #	Found in Release	Title	Release Note
334841	11.0	Users could not be selected via type-ahead when using Quickedit within the Workspace interface	This has been fixed
334177	11.0	Workspace panel scrolling and movement	Several improvements have been made to panel movement and scrolling within workspaces to improve usability.
