

Release Notes for ExtraView 11.2

Date: Sep 5, 2017

ExtraView 11.2 Release Notes
Feature Enhancements

Module: Add & Edit		
Issue #	Title	Release Note
349107	Autosizing of HTML Area fields	When entering multiple lines of text into an HTML Area field, the height of the field will grow automatically, to allow the user to work with their text more conveniently.
347066	Inline image and embedded document processing	<p>This is a major new feature which enables embedding images and document files directly into HTML Area fields, and into Log Area fields which are configured to display HTML.</p> <p>Users can use drag & drop and copy & paste to include inline images and to embed files directly inline into these fields. Issues submitted to ExtraView via EVMail also support the inclusion of embedded images.</p>
Count: 2 rows		

Module: Administration		
Issue #	Title	Release Note
348582	The * Remove Select All * layout cell attribute may now be added as a global data dictionary attribute	This enhancement allows the administrator to prevent users from select all the values in a multi-valued list as filters in a query. The values need to be selected individually.
348241	Added the display target to the "Where Used" popup in the data dictionary	Previously it was difficult to separate the desktop display target from the mobile display targets. The display target is now displayed within the layout details.
345914	Read Only If Attribute at the Sub Layout Level	There is a new layout cell attribute, which may be applied to embedded layouts on add and edit screens. This attribute, READONLY IF, allows an entire embedded layout to be made read-only based on the value of another field in the layout.
Count: 3 rows		

Module: Attachments		
Issue #	Title	Release Note
340560	Implemented a delete button next to the "Add" button to allow multiple attachments to be selected and deleted simultaneously	This is a minor enhancement which makes it simpler to delete many attachments within an issue, at one time
Count: 1 rows		

Module: BatchMail		
Issue #	Title	Release Note

ExtraView 11.2 Release Notes
Feature Enhancements

349042	Limit the size of email notifications that can be sent to the email server	With the introduction of embedded images and embedded documents within HTML Area fields users have started to add really large images and documents to ExtraView issues. In some cases these exceed the limit imposed by the email server. A new behavior setting named EMAIL_MAX_SIZE_MB has been introduced, with a default size of 8 MB. This value can be modified to match the limit of the email server. When the limit is exceeded ExtraView removes all embedded objects and the user is required to sign onto ExtraView from the email to view all the embedded objects.
340397	New "High Importance" flag for incoming and outgoing emails	<p>For mails received via EVMail, the new property named NOTIFICATION_PRIORITY can be set to the value of a checkbox field. When an incoming email has its high priority flag set in its header, the checkbox is set on within the field.</p> <p>For outgoing email notifications, a new inbuilt field named NOTIFICATION_PRIORITY can be placed on the notification layout. When this is checked, the high priority flag of the outgoing email is set so it appears within the email client receiving the email.</p>
Count: 2 rows		

Module: EVMail		
Issue #	Title	Release Note
345994	Enhanced processing of delimiters in email received and processed by EVMail	The EVMail utility has significant enhancements when processing incoming emails and is able to look for multiple delimiters within the email. This allows for more intelligent extraction of the "latest" text added to an email thread, so that the ExtraView issue associated with the thread is only updated with the most recent text added to the email thread.
345166	The line-spacing within the body of emails processed with EVMail that are then included within standard notifications has been improved	This particularly affected mail users who used Microsoft Outlook as their mail client. Outlook has the inexplicable behavior of removing blank lines within HTML formatted emails. When EVMail placed incoming emails into HTML Area fields (or Log Area fields using HTML), and then sent out these fields as part of the standard email notification, the loss of these blank lines led to odd looking formats. This has been improved to better display the blank lines in the way a user would expect.
345106	EVMail enhancements to choose whether to insert a new issue or update an issue	There are a number of new configuration options to have ExtraView be the arbiter of whether to insert or update issues which arrive via EV Mail. These options also provide better control over which parts of the incoming email will be stored.
333175	Removing header information from incoming mails	A new option, EVMAIL_SUPPRESS_HEADER, has been added to the EV Mail configuration. This allows the suppression of header information such as the "From:", "To:", "Send:", "Subject:" and "Date:" header information when the mail

ExtraView 11.2 Release Notes
Feature Enhancements

		is added to a field within ExtraView
Count: 4 rows		

Module: Internationalization		
Issue #	Title	Release Note
350201	The Translate System Messages and Prompts now displays the entire message to be localized	Previously, only the first 100 characters of a message to be translated was displayed on the screen within the Translate System Messages and Prompts utility. The full text was displayed in a mouseover popup. This has been improved so the entire message appears, without the need for the user to see a popup when they placed their mouse over the text.
Count: 1 rows		

Module: Mass Delete		
Issue #	Title	Release Note
340403	New Mass Delete Feature	This new feature allows a user, with the appropriate permission, to delete multiple issues by selecting them on a report, then choosing to delete them. There is an option to either delete the issues their selves, or the issues and all their history.
Count: 1 rows		

Module: Search / Report		
Issue #	Title	Release Note
350787	Some HTML tags in Formatted Excel output on column reports now output to newlines within a cell as opposed to creating a new cell	<p>Microsoft Excel has many limitations when handling HTML data as opposed to text data that is output from ExtraView. In order to attempt to keep as much data output from HTML Area fields into Excel from column reports, ExtraView now converts some HTML tags such as <p> and <div> to new lines. This keeps the text within a single cell.</p> <p>It is not planned to handle all HTML tags in this way, as satisfactory output of objects such as embedded tables and images will never be possible within Excel.</p>
350558	Container and Dashboard Reports selection enhancement	To provide clarity in systems where there may be many reports with similar titles and descriptions, the list of available reports has been decorated with the Report ID, allowing the user to better differentiate between these.
349088	New option to display x-axis chart values vertically and at a slant	This new chart option for value-based charts allows the labels on the X axis to be displayed horizontally, vertically or at a 45 degree slant.

ExtraView 11.2 Release Notes
Feature Enhancements

346771	Improved performance with the "Allow Additional Keyword Filters" feature	There is a significant improvement when returning results added from the keyword filter input field on reports. This field is added to the browser output of reports, when the user checks the "Allow Additional Keyword Filters" option within report editors. The improvement is most noticeable when adding multiple keywords in the input field.
340556	Fixed position summary and matrix report headers on report output	When viewing matrix and summary reports that exceed the height of the window within which they appear in a browser, if the user scrolls vertically, the column titles are frozen in position and remain visible.
Count: 5 rows		

Module: XML Import and Export		
Issue #	Title	Release Note
349360	New ability to exclude specific languages from XML export	Now, language exports of all the text messages can be set to include any combination of languages. If *None* is chosen, only the base locale of the system is exported.
Count: 1 rows		
Total Count: 20 rows		

ExtraView 11.2 Release Notes
Fixed Bugs

Module: Add & Edit			
Issue #	Found in Release	Title	Release Note
350613	11.1.1	Improved Ajax refreshes of folds within embedded layouts	There were some configurations where embedded folds within layouts required full screen refreshes to update their contents. This has been improved so that an Ajax refresh is used, leading to increased performance and to the user not losing the focus within the field with which they are working.
349535	11.0.1	Deleting a repeating row field in one repeating layout deleted values in a different repeating row layout on the same issue	The code was not getting the correct repeating row group id type for a given repeating row field. The code always used the information from the inbuilt layout named RELEASE. As a consequence, the values in the wrong repeating row were deleted.
332866	10.2	Original Project and Project(s) fields occasionally caused a popup message when these fields become read-only	The message "The value currently selected for the field was either deleted or deactivated by the administrator" was occasionally seen in the circumstances described. This has been fixed.
			Count: 3 rows

Module: Administration			
Issue #	Found in Release	Title	Release Note
345962	11.1	Some entries within the system log did not have the database values that were applied	<p>The following entries in the system log were not complete and did not have the values associated with the update. This has been fixed:</p> <p> ADD_USER_UDF DELETE_INTEREST_LIST_USER UPDATE_NAVIGATION_BAR DELETE_ESCALATION_RULE_USER DELETE_DATA_DICTIONARY DELETE_EV_TEMPLATE DELETE_INTEREST_LIST DELETE_INTEREST_LIST_ELEMENT DELETE_SCHEDULED_REPORT DELETE_NAVIGATION_BAR ADD_NAVIGATION_BAR ADD_SECURITY_PERMISSION DELETE_PRIVACY_GROUP DELETE_Q_LAYOUT </p>
			Count: 1 rows

Module: Business Rules

ExtraView 11.2 Release Notes
Fixed Bugs

Issue #	Found in Release	Title	Release Note
350323	11.0.3.1	The business action rule DELETE mistakenly deleted additional issues	This was caused by a timing issue when multiple ADD operations were initiated almost immediately by the same user, and the user not waiting for the screen to finish loading before initiating the next ADD operation. This only happened on an extremely complex screen which took many seconds to load. An alert is now sent to the user if they try this operation, asking them to wait for the initial operation to complete.
349528	11.1.0.1	STOP Rules caused an issue with the population of parent id field	This was principally a problem with user custom code referencing localized valued. However, the underlying JavaScript has been changed to use the name rather than the titles of the objects to prevent the problem recurring.
349353	11.1	Clone business rules and multi-valued fields	Adding values to multi-valued fields with the += operator were found to replace all the values in the list with those currently selected, not add the new values to those that were pre-existing. This has been fixed.
Count: 3 rows			

Module: File Import (GUI)			
Issue #	Found in Release	Title	Release Note
349020	10.2	Multi-valued repeating row fields not imported	This was a bug that was fixed
Count: 1 rows			

Module: General code issues			
Issue #	Found in Release	Title	Release Note
345208	11.0.1	Null exception error seen following a user session timeout	This was a minor problem which did not affect functionality, but resulted in an error being viewed on the screen. The error generated is now suppressed.
Count: 1 rows			

Module: Internationalization			
Issue #	Found in Release	Title	Release Note
349141	11.1.0.1	Upgrades to a localized site reverted some translated values	This happened when messages were previously modified in the default locale. This caused the upgradeMessage utility to update the localized values in the titles without looking at the user who last updated the message. This has been modified so that only messages inserted or modified by the system can be updated in this way.

ExtraView 11.2 Release Notes
Fixed Bugs

348623	11.1	Removed layout titles from the required field popup on add/edit screens	Within the popup that indicates that required fields are required when inserting or updating issues, the name of the layout was displayed. This information was not very useful and could sometimes be misleading when there were embedded layouts. Further, this field held text information that could not be localized into different languages. The decision was made to remove the reference to the layout name.
Count: 2 rows			

Module: Mass Update			
Issue #	Found in Release	Title	Release Note
350579	11.1.1	Error observed on a mass cloning operation from the mass update screen	An error was observed when performing a mass clone operation from the mass update screen. This was traced to some malformed image and document fields in the data being cloned. This has been fixed.
Count: 1 rows			

Module: Notification			
Issue #	Found in Release	Title	Release Note
349970	11.1.1	Size and display problem with inline images within template and ad hoc emails	Not all images contained within outgoing email templates and ad hoc emails were being displayed, and the image thumbnail as opposed to the full size image was being displayed. This has been fixed.
348120	11.0.4	Ad hoc emails sent image thumbnails as opposed to the full images	It was found that when an image field was included within an outgoing email template in the form \$\$IMAGE_FIELD\$\$, the thumbnail to the image that was used as its representation on screens was being sent as opposed to the image itself. This has been fixed so that the full image is sent.
Count: 2 rows			

Module: Quickedit			
Issue #	Found in Release	Title	Release Note
348434	11.1.1	Tabbing within Quickedit reports did not use the correct tabbing order as set in the layout	Both Column and Row orders for Quickedit are now supported, as set within the layout for the Quicklist report.
Count: 1 rows			

Module: Quickfind			
-------------------	--	--	--

ExtraView 11.2 Release Notes
Fixed Bugs

Issue #	Found in Release	Title	Release Note
347948	11.0.4	Searching for "İklim" yields no results	This was a problem with the uppercase "İ" character in the Turkish locale. Quickfind did not correctly search for these characters. This has been fixed.
Count: 1 rows			

Module: Report Scheduler			
Issue #	Found in Release	Title	Release Note
349591	11.1	Scheduled Reports generated to HTML and Browser formats were not rendered correctly	The scheduled report output of HTML and browser formats lost formatting. This has been fixed.
346170	11.0.3.3	The report owner was not saved as a recipient of the report when creating a new schedule	This has been fixed.
Count: 2 rows			

Module: Search / Report			
Issue #	Found in Release	Title	Release Note
350205	11.1.1	System hung when adding a report filter to a set of saved filters	This problem was only found on a single customer site and could not be replicated anywhere else. The sequence of operations to save the filters has been altered to ensure the problem does not recur
349865	11.1	Some existing reports were found to have performance problems after upgrading to version 11.1	This was caused by the new handling of fields with a display type of DAY. This has been reworked to improve the performance.
349831	11.1.0.1	Null Pointer Exception when attempting to run a Container Report	This occurred when a cChart report was within the Container report. This was fixed.
349525	11.1	Users in non-24 hour time could not run reports with date filters while in the Spanish locale	There are no traditional ante meridiem and post meridiem suffixes in Spanish, which caused a misunderstanding of how user with their personal option not set to 24-hour time would used dates in filters. This has now been fixed to work correctly.
347012	11.0.1	Repeating Row field did not display on a report if the field was part of filter criteria	This only happened on a hierarchical report if the behavior setting FILTER_CHILD_VALUES was set to YES, the repeating row field was placed on the report and there was a repeating-row field filter used at the child level. Under these circumstances, the values of the selected repeating row at hierarchy child level were empty. This was fixed.
Count: 5 rows			

Module: Sign On			
-----------------	--	--	--

ExtraView 11.2 Release Notes
Fixed Bugs

Issue #	Found in Release	Title	Release Note
349700	11.1	java.lang.NullPointerException on attempted new user insert via SSO	The code has been fixed to prevent the problem
346591	10.2	SSO upsert and company name - updating user accounts	<p>The logic to perform an upsert operation with SSO has been altered as follows:</p> <ol style="list-style-type: none"> 1. If SSO_COMPANYNAME is configured AND it has a non-blank value in the header, it will always be used in creating/updating the user 2. If SSO_COMPANYNAME is not configured or it has a null/blank value in the header, the app default COMPANY_NAME will be used to create/update the user 3. The user's company name is not used to compare existing user with the request to sign on a user
Count: 2 rows			

Module: Workspace GUI			
Issue #	Found in Release	Title	Release Note
348581	11.1	Message worker error observed in the application server log	This happened when loading a workspace which had been saved with a requirement for the user to have access to a specific business area / project, but the user did not have the necessary permission. This has been fixed.
Count: 1 rows			

Module: XML Import and Export			
Issue #	Found in Release	Title	Release Note
350111	11.1.1	Metadata migration imported a few users incorrectly	When the option to "Minimize the user information exported" is selected on the metadata export screen, user UDF values are now only exported if the containing user record is also exported. In addition, a user record will not be included in the "minimized" set just because a User UDF value is exported.
348997	11.1.0.1	Behavior settings excluded from XML Migration	The behavior settings named DOCUMENT_REPOSITORY_ROOT, DOCUMENT_REPOSITORY_OPT and DOCUMENT_REPOSITORY_DMAX are no longer migrated from a source to target system during metadata migration. These settings should be different on the source and target systems and this ensures they cannot be confused.
