7.0.16 Release Notes

Prepared - 7/18/13 10:48 AM

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
276309	Feature Enhancement	N/A	API & CLI	The get_valid_meta_data API command can now retrieve data for specific fields as opposed to retrieving data for all fields	A list of fields as parameters will retrieve just the metadata for the fields in the list.;
275410	Feature Enhancement	N/A	File Import (GUI)	New ability to import document and image field display types as part of the file import utility	There is a new extension to the file import utility in that document fields, image fields and attachments can now be imported as part of the process.;
264087	Feature Enhancement	N/A	Notification	Email notification settings may be set by Business Area and Project	The behavior settings for AD_HOC_EMAIL_FROM_ADDRESS, AD_HOC_EMAIL_FROM_SENDER, EMAIL_ADMINISTRATOR_NAME, EMAIL_ADMINISTRATOR_USER_ID, EMAIL_FROM_USER_ID, and EMAIL_FROM_USER_NAME may now be set for any Business Area and Project, overriding the global settings on the behavior settings screen.;
278891	Feature Enhancement	N/A	Search / Report	Simplified expressions using TIMESTAMP data types	Creating report expressions to compute the differences between two dates that used database TIMESTAMP fields (used in ExtraView DAY and DATE display type fields) was cumbersome and involved computing the days, hours, minutes and seconds separately. A new date_diff function has been created for use in report expressions to simplify the preparation of report expressions.;
278143	Product Bug	7.0.14	Add & Edit	Problem with Chrome 27.0.1453.94 m and list field behavior	This new release of Chrome introduced a bug within list fields, such that when a selection in the list was made, the cursor within the list would jump to the top of the list, and not remain with the selected value being visible. We have worked around the problem in the ExtraView code.;

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
279473	Product Bug	7.0.14	Add & Edit	Add issue screen closed after entering an ambiguous name in a User field	This only occurred in the situation where an installation was using an LDAP server, and a user used the ambiguous name popup to resolve which of two identical names were to be selected for a user popup field. The problem has been fixed.;
278806	Product Bug	7.0.16	Administration	Report expressions were limited to 255 characters when saved as a default expression in the data dictionary	These now allow 4,000 characters.;
279346	Product Bug	8.0	Attachments	Attachment drag-and-drop upload window showed that there was "mixed" signed and unsigned code	The ExtraView build process has been altered to ensure that the correct code signing certificates are in place. This was caused by an update by Oracle to the Java distribution.;
277569	Product Bug	7.0.14	Business Rules	Some email business rules did not trigger when there was more than one repeating row	This only occured when the rules acted on the inbuilt RELEASE repeating row. This has been fixed.;
277087	Product Bug	7.0.14	EV Mail	Attachment was missing in an issue which was created using EVMail	This was caused by badly formed emails, where the content-type and disposition of the attachment were unrecognized. We are now save the part as an attachment rather than discarding it.;
277933	Product Bug	7.0.11	EV Mail	EVMail import of a specific file type looked corrupted	When importing a Microsoft Word document that used the UTF-8 character set. Word inserts a Byte Order Mark (BOM) into the file. A user's Word file wrongly interpreted characters following the BOM as Chinese, and this was then uploaded into ExtraView. We now look for this sequence of characters in the input stream of characters and handle this odd combination.;
279404	Product Bug	7.0.15	General code issues	The date within a Day field was off by one day, when issue was updated using the NOWAIT feature	This was fixed.;
275592	Product Bug	7.0.15	Jira Integration	java.lang.ClassCastException: java.util.HashMap cannot be cast to java.io.File error	This error message was seen in the log file with regular occurence. It was simply poor logging, as opposed to their being a problem. This was fixed.;
276767	Product Bug	7.0.15	Jira Integration	Temporary attachment files were not deleted	Temporary files used when synchronizing attachments were not deleted after their use. This has been rectified.;

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
277259	Product Bug	7.0.14	Layout Rendering	Textarea fields within email full layouts were not displaying contents of Related Issue fields	This was fixed.;
277311	Product Bug	7.0.4	Layout Rendering	Read Only If layout cell attribute causing unexpected results within Repeating Rows	This was only an issue with DOCUMENT and IMAGE fields. If there was a field of one of these types on a repeating row with a Read Only If layout cell attribute, the user could not delete that row. This has been fixed.;
278395	Product Bug	8.0	Relationships	The incorrect Business Area/Project was used for relationship group sort in embedded popup for ADD screens	This was a minor problem that only manifested itself when clicking on column headers on related issue displays to resort the list. This was fixed.;
259282	Product Bug	6.5.1.5	Search / Report	Plain Excel file output in a scheduled report did not format correctly with Japanese characters	This was a problem that was fixed;
274967	Product Bug	7.0.12	Search / Report	Scheduled report error if the report owner who scheduled the report had his permission revoked to schedule a report	This is an unusual circumstance when a report owner has his permission to schedule further reports revoked. Reports this user owned then gave an error when the schedule kicked off the report. This has been fixed, so the report will continue to be generated in these circumstances.;
277227	Product Bug	7.0.10	Search / Report	Excel output of a report renders carriage returns and end of line characters as 
 within textarea fields	This was a recent change which did not take the Excel output into account. This was fixed.;
277294	Product Bug	7.0.4	Search / Report	Memory leak in scheduled reports	Scheduled reports had a memory leak. If the same report was run very frequently without the system having time to recover, the result was a slowdown of response for all users. This has been fixed.;
277596	Product Bug	7.0.15	Search / Report	Keyword search for "non-indexed" words was not working correctly	The correct functionality is that if a keyword search is carried out on a word that contains special characters such as hyphen and underscore, then it will be found using the Quickfind mechanism if the word is embedded in double-quotes. If the word with special characters being searched for is not surrounded by double-quotes, then a slower, non-indexed search is performed.;
277645	Product Bug	7.0.4	Search / Report	Filter values were lost during runtime filter execution with Expanded Query Filters	This was a problem that affected multi-valued list fields only. This has been fixed.;
