7.0.17 Release Notes

Prepared - 9/23/13 11:59 AM

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
282513	Product Bug	7.0.14	Administration	Password Expiration was not working as expected	This was actually working, but the GUI was misleading. Now the GUI has a specific radio button option offering an option to the administrator to expire the user's password;
280788	Product Bug	7.0.14	Database	Very large Text Area fields could be subject to data loss with MySQL databases	When a Text Area field exceeded 4,000 characters in a MySQL database, there was a situation where some characters at the boundary of each 4,000 character segment could be lost. This has been fixed.;
281711	Product Bug	7.0.16	Drag and Drop	Drag-and-drop adding of documents to repeating row fields with IE8	This problem only affected genuine IE8 users (not IE9 or IE10 in compatibility mode). After uploading a document field that was placed within a repeating row, other text fields would not accept input. This required other configuration items such as the document field being the last field on the repeating row. The problem has been fixed.;
280370	Product Bug	7.0.10	Escalation	Escalation rules did not correctly access non-24x7 calendars	This was a bug which was fixed.;
281341	Product Bug	7.0.10	File Import (GUI)	Behavior setting OMITTED_USER_IMPORT_COLUMNS has been improved	There was a problem with the implementation in that the user's home page reports were not always mapped correctly. This has been fixed.;
282147	Product Bug	6.6.3	General code issues	An upgrade to a site deleted customer inserted metadata translations for non-English languages	This occurred only to metadata messages created by the customer in non-English locales. The problem was fixed so that these messages are now kept intact upon executing the upgrade process.;
282876	Product Bug	7.0.16	Layout Rendering	Quickedit on the Home Page would not work	This was fixed;

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
281571	Product Bug	7.0.15	Notification	Mailing list disappeared after selecting values	This was a minor issue which only affected users who were on the mailing list as a result of being on a relevant interest list. This has been fixed for this release.;
282490	Product Bug	7.0.15	Perforce Integration	Perforce integration failed to update ExtraView records due to a problem with the RELEASE_STATUS field	This issue was caused by a bug in the ExtraView API that is used by the P4 integration daemon to update the RELEASE_STATUS field to a new value. The update was clearing the value of the RELEASE_STATUS field. This has been fixed.;
280649	Product Bug	7.0.14	Search / Report	Scheduled Matrix Reports did not display all the data in some circumstances	When a scheduled matrix report had the option set to include blank rows, not all the data would be included. This has been fixed.;
280716	Product Bug	8.0	Search / Report	Schedule reports that were delivered as Excel formatted files contained HTML in output	This problem was introduced in the current release. It has been fixed.;
281289	Product Bug	7.0.5	Search / Report	Historic data filter threw "single row subquery returns more than one row error"	This was an obscure problem where there were multiple issues with absolutely identical timestamps of being updated. This has been fixed.;
282179	Product Bug	7.0.2	User Custom	Multiple, different custom reports could not be run in the same session without causing a session expiry	This problem has been fixed.;
Count: 13 records
