7.0.5 Release Notes

Prepared - 6/3/12 1:39 PM

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
253458	Feature Enhancement	N/A	EV Mail	New ability to capture the TO recipients in an incoming email and place them in a UDF field	There is a new EVMail configuration item named EVMAIL_TO_UDF. This allows the storing of the email addresses within the TO header of an incoming email within a user defined field.
251872	Feature Enhancement	N/A	General code issues	Encrypt the user ID in session cookies	Although session cookies are transient and are not visible on a computer, the user ID within the session cookie is now encrypted for added security.
252387	Feature Enhancement	N/A	General code issues	Block specific file types from being uploaded as attachments	This new feature introduces a new behavior setting named BLOCK_ATTACHMENT_EXTENSIONS. This contains a delimited list of file extensions. Files of these types will be blocked from being added to the database, when uploaded as attachments, documents or images. The default is that all file types can be uploaded.
252578	Feature Enhancement	N/A	Jira Integration	New Jira integration daemon	This new integration provides bidirectional synchronization of Jira with ExtraView. For more information, see the documentation at http://docs.extraview.com/site/extraview-70/integration-guides/jira-integration-guide.
252401	Feature Enhancement	N/A	Search / Report	Some dates fields were formatted incorrectly on email notifications	The fields TIMESTAMP_TRUNC and DATE_CREATED_TRUNC were not displayed in the user's date format, and were always displayed in the form DD-MM-YYYY 00:00. This has been fixed.
253384	Product Bug	7.0.2	Administration	Time zone calculation problem when a user's time zone is different from the database time zone	This problem involved a configuration using DAY fields and users who had a Custom Date mask. When the user updated a record that was entered in a different time zone, a day would be added to the result. This has been fixed.
251850	Product Bug	6.6.2	BatchMail	BatchMail error processing with invalid email addresses	BatchMail would cease sending email notifications when it could not handle badly formatted email addresses within the issue being processed. This processing has been changed so that the badly formed email addresses are not used, and processing continues.
251666	Product Bug	7.0.4	EV Mail	ExtraView was unable to parse a particular mail message received with EVMail	The incoming email had an invalid header. ExtraView has been changed to deal with invalid date formats within incoming email headers
251669	Product Bug	6.6.3	General code issues	New behavior setting that allows a definable list of file type extensions to be blocked from uploading by end users	A new behavior setting named BLOCK_ATTACHMENT_EXTENSIONS allows a list of file extensions to be set up. End users will not be able to upload files from their local computers if they have extensions that are enumerated in this list.
251865	Product Bug	6.6.5	General code issues	User had the ability to change their role by manipulating form parameters	A user with advancecd knowledge of how to manipulate form parameters was able to change their role to a role to which they did not have permission. This operation has been stopped and additional checks are made to ensure a user can only adopt a role to which they have permission.

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
252697	Product Bug	7.0.4	Layout Rendering	Visible if on Radio Button field stopped working after an upgrade from 7.0.3	This proved to be a difficult to reproduce problem that only happened with an unusual configuration, where a user drilled down from an add or edit screen to add a child issue in a different area and project, but where the two layouts shared an embedded layout type. Under this configuration, "visible if" on radio buttons did not work correctly.
251738	Product Bug	6.6.6	Perforce Integration	Perforce Checkin of comments were not being added to ExtraView log area fields	This problem has been resolved
253514	Product Bug	7.0.4	Search / Report	Saved report filters could be lost within reports using runtime filters, upon an upgrade from versions prior to 7.0	This problem resulted in saved filters being ignored after the upgrade. The problem has been resolved.
