8.0.1 Release Notes

Prepared - 8/18/13 9:13 PM

Release Notes

Issue #	Category	Found In Release	Module	Title	Release Note
278736	Feature Enhancement	N/A	Administration	Add configuration file propert entries for User Custom Task definitions	Custom properties can now be managed within the administration task itself.;
280086	Feature Enhancement	N/A	Administration	Reorganized Task Management administration screen	The screen has been simplified and will now fit on most screens without the administrator needing to scroll horizontally.;
279453	Feature Enhancement	N/A	Database	New option to encrypt the properties within the Configuration.properties file	This has been developed primarily to allow the encryption of the database password within the Configuration.properties file. Set ENCRYPT_PROPERTIES=YES to enable the capability of encrypting property values. Then use the form <property-name> = ENC(encrypted-value) to encrypt any value, A program is provided to encrypt the values.;
280720	Feature Enhancement	N/A	General code issues	Introduced a new security key for obtaining user data through the API	A new permission key named USER.ACCESS_UDF_DATA has been created to allow roles independent of the administrator role to be able to access the user defined fields within users' records.;
278411	Feature Enhancement	N/A	Mass Update	Mass update errors now display additional information	Errors now contain information about the field that causes the error, and there is a link to the issue from the error screen.;
281199	Feature Enhancement	N/A	Quickfind	Quickfind enhancements	The underlying search technology (Apache Lucene) has been upgraded to the latest version (4.4.0) in order to eliminate some known issues and bugs, especially working within an NFS environment.;
279147	Feature Enhancement	N/A	Relationships	New column report option to display parents without children	ExtraView now supports displaying report hierarchies where parent issues do not have any children. This works on multi-level hierarchies;

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
258178	Feature Enhancement	N/A	Search / Report	Administrators may schedule reports, without being on the recipient list	Previously the person setting up the scheduled report had to be on the recipient list for scheduled reports. This is now optional, as many administrators set up the report schedules, but did not want to receive the reports.;
278644	Feature Enhancement	N/A	Search / Report	Add ability to change run time filters to Calendar Report display page	Calendar reports that contain runtime filters now have an icon that appears from within the calendar report output, by the report title. This allows the user to reset any runtime filter while running the report.;
278891	Feature Enhancement	N/A	Search / Report	Simplified expressions using TIMESTAMP data types	Creating report expressions to compute the differences between two dates that used database TIMESTAMP fields (used in ExtraView DAY and DATE display type fields) was cumbersome and involved computing the days, hours, minutes and seconds separately. A new date_diff function has been created for use in report expressions to simplify the preparation of report expressions.;
279219	Feature Enhancement	N/A	Search / Report	Implement Hover Layout on the Edit Button.	The Edit button has been enhanced, so that a hover layout may be applied to the EDIT_BUTTON within the data dictionary or within a layout that contains the button.;
280717	Feature Enhancement	N/A	Search / Report	Change to format of fields output to Microsoft Excel reports	A new behavior setting named EXCEL_PRESERVE_LEADING_ ZEROS has been introduced. This allows the spreadsheet to retain leading zeroes output. For example, if the setting is NO, then when 0001234 is output, the Excel cell will display 1234. If the setting is YES, then the Excel cell will display text as 0001234.;

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
278979	Feature Enhancement	N/A	User Interface Issues	New ability to have a different navigation bar for each user role within the system	A new administration utility is provided to allow the setup of different navigation bars for different user roles within your installation. Each user role will see the specific buttons configured for their role. Each navigation bar may offer sub-menus. A variety of actions can be configured for each button and each item on a sub-menu.;
280586	Feature Enhancement	N/A	User Interface Issues	All built-in navigation bar images have been altered to be of type png	Previously the built in navigation bar images were of type gif. They are now of type png. Further, using the new navigation bar utility, any navigation bar button may be of any type and of any name.;
279473	Product Bug	7.0.14	Add & Edit	Add issue screen closed after entering an ambiguous name in a User field	This only occurred in the situation where an installation was using an LDAP server, and a user used the ambiguous name popup to resolve which of two identical names were to be selected for a user popup field. The problem has been fixed.;
278806	Product Bug	7.0.16	Administration	Report expressions were limited to 255 characters when saved as a default expression in the data dictionary	These now allow 4,000 characters.;
279346	Product Bug	8.0	Attachments	Attachment drag-and-drop upload window showed that there was "mixed" signed and unsigned code	The ExtraView build process has been altered to ensure that the correct code signing certificates are in place. This was caused by an update by Oracle to the Java distribution.;
253527	Product Bug	6.5.1.6	Business Rules	Escalation Rule - [ERROR] ESCALATION Extra close parenthesis in rule: Rule not implemented	This error was only observed when an escalation rule list value had a single quote within the value. These are now allowed.;
280788	Product Bug	7.0.14	Database	Very large Text Area fields could be subject to data loss with MySQL databases	When a Text Area field exceeded 4,000 characters in a MySQL database, there was a situation where some characters at the boundary of each 4,000 character segment could be lost. This has been fixed.;

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
281711	Product Bug	7.0.16	Drag and Drop	Drag-and-drop adding of documents to repeating row fields with IE8	This problem only affected genuine IE8 users (not IE9 or IE10 in compatibility mode). After uploading a document field that was placed within a repeating row, other text fields would not accept input. This required other configuration items such as the document field being the last field on the repeating row. The problem has been fixed.;
280370	Product Bug	7.0.10	Escalation	Escalation rules did not correctly access non-24x7 calendars	This was a bug which was fixed.;
279404	Product Bug	7.0.15	General code issues	The date within a Day field was off by one day, when issue was updated using the NOWAIT feature	This was fixed.;
280772	Product Bug	8.0	Layout Rendering	LABEL_WRAP behavior setting did not work	This was a bug that was fixed.;
281571	Product Bug	7.0.15	Notification	Mailing list disappeared after selecting values	This was a minor issue which only affected users who were on the mailing list as a result of being on a relevant interest list. This has been fixed for this release.;
249634	Product Bug	6.6.4	Search / Report	Calendar Reports - problem when trying to display multiple calendar reports that had hierarchies defined	When hierarchies were defined within calendar reports, and multiple calendar reports were overlaid on the same output, no results were displayed. This has been fixed.;
278067	Product Bug	7.0.15	Search / Report	Keyword search for "non-indexed" words was not working correctly	The correct functionality is that if a keyword search is carried out on a word that contains special characters such as hyphen and underscore, then it will be found using the Quickfind mechanism if the word is embedded in double-quotes. If the word with special characters being searched for is not surrounded by double-quotes, then a slower, non-indexed search is performed.;
278804	Product Bug	7.0.14	Search / Report	Report screen not rendering correctly	In Internet Explorer 7 only, the list of fields in the report editors would sometimes be slightly too low, obscuring the buttons beneath the field list in the column report editor. This has been fixed.;

Issue #	Category	Found In Release	Module	Title	Release Note
280649	Product Bug	7.0.14	Search / Report	Scheduled Matrix Reports did not display all the data in some circumstances	When a scheduled matrix report had the option set to include blank rows, not all the data would be included. This has been fixed.;
280716	Product Bug	8.0	Search / Report	Schedule reports that were delivered as Excel formatted files contained HTML in output	This problem was introduced in the current release. It has been fixed.;
281643	Product Bug	8.0.1	Search / Report	User fields on report output to browser did not provide working mailto links	This has been fixed.;
280845	Product Bug	8.0	User Custom	The addCustomButtonTemplate method did not always return buttons in the correct order	The exit did not correctly count the buttons when the Next and Previous buttons were suppressed on the Add and Edit screens. This has been fixed.;
Count: 31 records
