Release Notes for ExtraView 8.1.1

June 30, 2014

Feature Enhancements

Issue #	Module	Title	Release Note
292117	Administration	Added additional security permission keys to user profile fields	The following fields on the user screens are now controlled with security permission keys: Personal Options USER.TEXT_SIZE USER.LANGUAGE USER.TIME_ZONE USER.DATE_FORMAT USER.CUSTOM_DATE_MASK USER.HOURS_12_24 USER.CHART_FONT Notification Options USER.NOTIFICATION_PRIMARY USER.NOTIFICATION_ALTERNATIVE USER.EMAIL_FORMAT Start Page Option USER.START_PAGE
293171	EV Mail	EVMail native support for Microsoft Exchange servers	ExtraView can now be configured to talk directly to a Microsoft Exchange server, without needing to use the POP3 protocol.
294276	Layout Rendering	Allow a message to appear to end users when no related issue items exist on a related issue display	Early versions of ExtraView had a message "No Related Items to Display" appear within a related issue display, when there were no related items. This message was considered superfluous and removed. A customer wished to see this, therefore an enhancement has been made to introduce a new behavior setting named NO_RELATED_ITEMS_MESSAGE. An optional message may now be placed in this setting, and will appear when there are no related items.
276411	Perforce Integration	New 64-bit Installer for Perforce integration	There are now both 32 bit and 64 bit installers for the Perforce integration daemon.
263213	Relationships	Enhanced relationship group search filters for related issue displays	There is a new configuration option for related issue display layouts. You may now select a list type field as a filter, and use either a specific value in the list, or use the current value set in the list, as it appears on the user's screen when they open the related issues.

Fixed Bugs

Issue #	Found in Release	Module	Title	Release Note
292066	8.1	API & CLI	The GET_FIELDS API command did not work with repeating record fields any longer	This has been fixed.
292276	8.0.4	API & CLI	Allowed_list command returned all child values, not just those defined in allowed values	This has been fixed.

Fixed Bugs

Issue #	Found in Release	Module	Title	Release Note
292180	8.0.4	Add & Edit	FIELD/LAYOUT VISIBLE IF Variable = 1 did not work	The software was handling the data type incorrectly. There are rules on how values are compared: 1. For "equal" and "not equal", you can compare strings or numeric values 2. For ">" and "<", only numeric fields can be compared (NUMBER, DECIMAL, and CURRENCY display types)
294750	8.1	Add & Edit	The issue clone message needed to respect the value of ITEM_ID_DISPLAY	When cloning an issue a comment is added to each issue, showing the original ID and the ID of the cloned issue. This message needed to display the ALT_ID when this is in use, as opposed to only displaying the ID.
293467	8.0.4	Administration	Could only display / export 500 rows at a time from the User Account Management screen	Previously, the behavior setting RECORDS_PER_PAGE was used to control the number of records being displayed / exported. This function now uses its own setting, named USER_RECORDS_PER_PAGE to control the number of records being displayed / exported.
294089	8.1	Administration	File Import of user information could not use the LOGIN_ID field	The LOGIN_ID field has been added to the list of valid fields that may be imported with user information.
294514	8.1	Administration	Admin screens were slow when there were 10,000 or more values in a list	The speed of generating very large lists has been improved.
293895	8.0.4	Allowed Values	Allowed Value behavior had changed in version 8.0.4	The behavior setting AV_NULL_PARENT_IS_NONE was affecting defining new parent/child settings. When it was set to YES and if the Allowed Value child values associated with a parent "default" and you added a new parent and then wished to select a few children, the GUI was auto-populating the child settings with all of the values associated with 'default' as opposed to only the allowed values. This has been fixed.
292568	9.0	Attachments	Java 7, Build 55 breaks file uploads	Yet again, Oracle introduced problems with the latest Java client for Windows. We have worked around the problem they introduced.
294250	8.1	Business Rules	Rules incorrectly escaped entries when it redisplayed after an update	Rules that contained valid HTML would sometimes be displayed incorrectly after being updated in the rules editor. This has been fixed.
292859	8.1	EV Mail	EV Mail with ALT_ID fields did not work	This has been fixed.
293997	8.0.4	File Import (GUI)	File Import Utility -- embedded layouts and default area/project interplay	A bug was uncovered when trying to use the File Import utility, and importing data into a business area / project that was not the user's current business area and project. The utility could not match the imported field names to the valid field names expected. This has been fixed.
292516	8.1	Layout Rendering	IE8 and the "Add New" list value function caused list values to "blank out"	This was only an Internet Explorer 8 problem. It has been fixed, so that values render correctly.
294960	8.1	Search / Report	Reports using SYSDATE as a filter on DAY fields were throwing errors	This has been fixed.
295098	8.1	Search / Report	Scheduled Reports editor did not correctly save changes to the text entered	Once text to accompany a scheduled email was entered, it could not be updated. This was a bug introduced in 8.1 with the new editor tool. It has been fixed.
293989	8.1	Workspace GUI	Could not use the display as URL or link to access a website from within a workspace	This was fixed, but there is still an outstanding issue which cannot be fixed. The HTTP protocol used to access the external site must match the protocol used to access ExtraView. This is a browser security issue.

Fixed Bugs				
Issue #	Found in Release	Module	Title	Release Note
293539	8.1	XML Import and Export	button_action attribute did not "swizzle" internal id when using XML export and import	This only affected sites which used the new alternative navigation bars. This has been fixed.
