Release Notes for ExtraView 8.1.2

August 27, 2014

Feature Enhancements

Issue #	Module	Title	Release Note
295661	Administration	Extended the screen paging logic to UDF list fields for all administration screens	The pagination logic that previously allowed an administrator to scroll through long lists of users has been extended to all large lists within the administration screens.
296348	Administration	New personal option to not include attachments on outbound notifications	This is a new personal option that allows each user to suppress attachments as part of notifications they receive.
295401	EV Mail	EVMail enhancements	There are two enhancements: A) A new Subject line lookup - EVMAIL_SUBJECT_LOOKUP - setting B) Email parsing and field assignment - PARSE_EMAIL and PARSE_FIELD settings
295565	Notification	Enhancement to SUPPRESS_STANDARD_EMAIL_LIST behavior setting	The SUPPRESS_STANDARD_EMAIL_LIST can now be set by Business Area and Project, as opposed to being set globally.
297429	Search / Report	Increased the size of the popup list input field	The width of a popup list field used as a runtime filter or advanced query filter has been increased to 40 characters on the display.

Count: 5 records

Fixed Bugs

Issue #	Found in Release	Module	Title	Release Note
296522	8.1	Add & Edit	Required fields were not being required at the time of update	This was caused by required fields within sublayouts not being processed correctly in all circumstances. The problem has been fixed.
298268	8.1.1	Add & Edit	Relationship connection field had a value but was not displaying on screen	This proved to be an unusual combination of features being used, where the parent ID of an issue used the ALT_ID configuration, and the ALT_ID contained non-numeric characters. This has been fixed so that in these circumstances, the ALT_ID may contain any combination of alpha and numeric characters
293895	8.0.4	Allowed Values	Allowed Value behavior had changed in version 8.0.4	The behavior setting AV_NULL_PARENT_IS_NONE was affecting defining new parent/child settings. When it was set to YES and if the Allowed Value child values associated with a parent "default" and you added a new parent and then wished to select a few children, the GUI was auto-populating the child settings with all of the values associated with 'default' as opposed to only the allowed values. This has been fixed.

Fixed Bugs

Issue #	Found in Release	Module	Title	Release Note
297607	8.0.4	Allowed Values	Allowed Value problem updating issues via Quickedit	This issue required both the parent and child fields to be placed upon a Column report, and Quickedit then being used to update the parent value only, leaving an invalid child value. The dependency popup window that appears during the record should have caught this change, but failed to do so. The update then failed because of the invalid allowed values in the record. This has been fixed to ensure the popup window captures a new value for the child when the parent has been changed.
296853	8.1.1	Attachments	Manual file uploads were not working in IE 10	This was fixed and was only related to using IE 10
296371	8.1.1	Business Rules	Load rule not firing when Add screen rendered as result of Add buton from RID header	This was caused by the rules not correctly processing the transition from the edit screen into an add screen, and not understanding that the load rules for the add screen needed to be triggered. This has been fixed.
296255	8.1.1	Database	Performance issue on mysql 5.5	This was related to a query processing linked records and retrieving information from the related record into the current record. The query has been improved. What's interesting is that MySQL 5.6 processes the query with much less overhead.
296214	8.1.1	Mass Update	Mass update of repeating row records would not work across all sites	This was localized to be a problem when text fields were used as filters to prepare the list of fields to be processed by the mass update. The problem was fixed.
296754	8.1	Mass Update	Trying to do a Mass update gave an error	This was related to an unusual configuration of allowed values on the fields that could not be updated during the mass update. This has been fixed.
297437	8.0.3	Quickfind	Keyword query issue with "stopwords"	An earlier decision had been made to disallow stopword lists with Quickfind, and allow users to search for all words, no matter how simple. However, the parser that handled the keyword search string still stopped the search for stopwords such as "the". This has been fixed.
285101	8.0.1	Search / Report	Report permissions are not working correctly	This was caused by an unusual set of permissions for the report. The problem has been solved with a minor code change, to better determine a user's permissions to a report.
297430	8.1.1	Search / Report	Expanded Filters were not behaving correctly on saved reports	Multiple selections in the filter were being ignored when reports configured with runtime filters on multi-valued list fields were set. This has been fixed.
292350	8.1	XML Import and Export	Metadata Export failed with out-of-memory error on very large tables	This affected the security_user table when there were more than 200,000 users in the table. The problem has been fixed.

Count: 13 records
