

## Release Notes for ExtraView 8.1.3

September 10, 2014

Feature Enhancements			
Issue #	Module	Title	Release Note
297897	EV Mail	New option to always use HTML version of an incoming email message instead of the plaintext version	This EV Mail enhancement allows incoming emails to be stored either as plain text or as HTML, or as both.
Count: 1 records			

Fixed Bugs				
Issue #	Found in Release	Module	Title	Release Note
298392	8.1.1	Notification	CC email lookup should continue processing when it encounters a User ID value that is formatted like an email address	There was a case where a User ID was formatted as an email address, but this was different from the email address in the user's account. The User ID was not a valid email address, and so the user failed to receive mail. This has been fixed to always use the value in the email address field of the user account.
298991	8.1.2	XML Import and Export	XML Import failed with the "Map unmatched titles" option	When this option was checked on the XML import, the wrong count of records was returned, and no records were processed. This has been fixed.
Count: 2 records
