Release Notes for ExtraView 8.1

April 10, 2014

Feature Enhancements

Issue #	Module	Title	Release Note
275406	Add & Edit	New Russian locale added to the calendar popup	This enhancement allows calendar popups to be displayed in the Russian language.
286907	Database	Added support for Microsoft SQL Server 2012 version	SQL Server 2012 is supported with this version of ExtraView onwards
70367	Escalation	New ability to define advanced filters with escalation rules	Escalation rules now use the advanced form of filters, allowing any number of filters to be used, and for the filters to use the full range of operators for each field type. Previously only 5 filters could be defined, and could only use the "equals" operator.
287982	General code issues	New, improved HTML Area field editor	The HTML Area field has been improved with a new look and significant new functionality. There are 3 inbuilt toolbars which can be configured to show a minimal set of functions, a medium set of functions or the full set of functions.
290466	General code issues	Support for the CA Siteminder SSO product, when it severely restricts the character set that may pass through its security layer	The CA SiteMinder SSO product has the ability to restrict almost all non-alphabetic and non-numeric characters. ExtraView now encodes URLs to take account of this mode and will work correctly with SiteMinder when it is configured in a way that stops characters such as quotes within a URL.
289320	Mass Update	Text area and other similar field types are now available within the Mass Update utility	Text Area, Print Text, and HTML Area fields may now be updated through the Mass Update utility.
288565	Quickfind	Ability to configure multiple FullTextIndex synchronization tasks across multiple nodes in a clustered environment	If you have a clustered environment with multiple application servers on separate physical servers that do not have a shared filesystem available, the indexes can now be maintained on each individual node.
286180	Search / Report	Additional row titles may be added to the Planning Report	Up to two new title rows may be added to the report for display purposes.
286406	Search / Report	New feature to allow Planning Reports to run custom code functions	Two new custom code functions named ucSearchPlanningReport and ucPlanningReportPostLoad have been created to allow planning reports to execute custom functions when running.
288285	Search / Report	Hover text on reports is now available on all appropriate report types	Previously, hover text was only available on Quicklist reports. This usage has been extended to buttons on Column and Taskboard reports.

Fixed Bugs

Issue #	Found in Release	Module	Title	Release Note
291215	8.0.4	Add & Edit	Related issue display resizing within accordion fold fields on layouts caused scroll bars to appear unnecessarily	This configuration resulted in scroll bars appearing around related issue displays, even when there was sufficient room. The resizing of the related issue displays now takes into account this configuration to correctly size their displays.
291223	8.0.4	Notification	HTMLArea type fields are were not visible in email notifications	A bug was introduced into version 8.0.4 which prevented HTMLArea fields being seen in email notifications. This was fixed.

Fixed Bugs

Issue #	Found in Release	Module	Title	Release Note
290090	7.0.17	Perforce Integration	The Perforce integration daemon did not find all the values for user fields	This has been fixed so the code returns all the user members of the lists reliably
289867	8.0.4	Search / Report	Java exception occured when editing reports that had a "popup" Session Variable	This problem only occurred when running the report from the report editor. The report with this configuration ran correctly from the report screen. This problem has been fixed.
289882	8.0.4	Search / Report	Could not "save as" .WMV attachments in Internet Explorer browsers	This has been fixed.
289969	8.0.3	Search / Report	Empty number fields displayed with a 0 value within the Excel output of results	This was inconsistent with other report outputs, where empty values were displayed with empty fields. Excel output now shows an empty cell when there is no value in the field.
290214	8.0.4	Search / Report	Date display type fields within column reports output to plain Excel caused errors	This only occurred when there was an empty date field. There was no error to the end user who saw the correct results, but an error was recorded within the log file.
291163	8.0.3	Search / Report	Repeating row records in Excel with plain output were displayed on a single row instead of separate rows	This was a bug which was fixed.
289915	8.0.4	XML Import and Export	XML Import was duplicating Business Calendar's upon import	This was a bug which resulted in multiple, redundant calendars being created in the database. It has been fixed.
