

# Release Notes for ExtraView 11.0.3.1

Date: February 16, 2017

ExtraView 11.0.3.1 Release Notes  
Feature Enhancements

Module: History		
Issue #	Title	Release Note
337433	History layouts could take a long time to render	When a History layout embeds many related issue displays, and each of these related issue displays bring back many issues, the display took a long time to render (basically retrieving the product of the number of updates to the issue and the number of related issues). To alleviate this problem, two new custom field types, REPORT_FOLD_PRE and REPORT_FOLD_POST have been created, allowing the administrator to embed the related issue displays within folds, so that their contents are only retrieved and rendered when the user opens the fold. This improves performance considerably.
		Count: 1 rows

Module: Report Scheduler		
Issue #	Title	Release Note
339091	Scheduled reports were disabled when the user's account who created the schedule was disabled	This was working as designed, but caused problems when a user mistakenly locked themselves out of their account by losing their sign on password and making too many sign on attempts. This caused the reports they had scheduled to be suspended. The logic has been improved, so that under this condition, scheduled reports will remain working. Also improved is a new prompt for the administrator who purposely disables a user account. If the account is the owner of scheduled reports, then action must be taken to move the ownership of the schedule to a new account.
		Count: 1 rows

Module: Search / Report		
Issue #	Title	Release Note
338513	Report performance when the report utilized multiple hierarchies	There are several improvements to reports that are defined with multiple hierarchies, all resulting in improved performance.
		Count: 1 rows
<b>Total Count: 3 rows</b>		

ExtraView 11.0.3.1 Release Notes  
Fixed Bugs

Module: EV Mail			
Issue #	Found in Release	Title	Release Note
339093	11.0.3	Lost formatting (line breaks) in EVMail HTML Area fields on add and edit screens	This was due to an incompatibility between the style of the source within Microsoft Outlook and the style used for paragraphs within ExtraView's HTML Area fields. The style within ExtraView now renders a small amount of space after each paragraph to improve the presentation.
338972	11.0.3	EVMail settings were not parsing out their own email addresses	ExtraView no longer saves the MAILBOX_USER email address in the EVMAIL_TO_UDF and EVMAIL_CC_UDF fields as email recipients
			Count: 2 rows

Module: General code issues			
Issue #	Found in Release	Title	Release Note
339315	11.0.3	blocking logs on security_user table at mjn - unable to log in	This was traced to a one-time event where a user had many open report windows within a workspace, each with different page sizes. The user then signed into ExtraView with a different browser, and caused a locking condition. This has been resolved.
			Count: 1 rows

Module: Search / Report			
Issue #	Found in Release	Title	Release Note
339882	11.0.3.1	Folder display within the document repository	There were occasions within the document repository when the document tree did not display correctly. Folders were missing or displayed in the wrong place within the tree. This only happened when there were many documents within a tree. To resolve the problem, drag-and-drop capability within the tree has been disabled for the 11.0.3.1 release and will be re-enabled within 11.0.4 once the issue has been fully resolved.
339162	11.0.3	Selecting field not in *None* vs. field in *all vals* operators were not working correctly when filtering on repeating rows and not returning repeating row data	This was a rarely used set of filter combinations that did not work as expected. The SQL has been altered to now produce the correct results
334506	11.0.1	"Group By" Column reports displayed duplicate headers when paginating ahead on browser output reports	This was a bug that was fixed.
