

# Release Notes for ExtraView 11.2.2

Date: Oct 12, 2017

ExtraView 11.2.2 Release Notes  
Feature Enhancements

Module: Add & Edit		
Issue #	Title	Release Note
352298	New localized popup calendar for the Thai language	If the user's locale is set to the Thai language, the popup calendar appears in the Thai language.
Count: 1 rows		

Module: BatchMail		
Issue #	Title	Release Note
346103	Added a Return-Path to the headers of outgoing emails	This allows an organization to better route and handle undeliverable emails sent from ExtraView
Count: 1 rows		

Module: Business Rules		
Issue #	Title	Release Note
345630	Multi-valued user fields and business rules	This minor enhancement allows a rule to be set up where a multi-valued user field may be assigned a new value in a business rule where the value is "USER", thereby adding the current user's name into the field alongside existing entries.
Count: 1 rows		

Module: File Import (GUI)		
Issue #	Title	Release Note
351174	The File Import Utility now displays better error information when importing Repeating Row data	Previously it was difficult to find and fix errors in an import file which contained repeating row data as it was not obvious which repeating rows contained errors. The error reporting has been improved to avoid the problem.
Count: 1 rows		

Module: Internationalization		
Issue #	Title	Release Note
351271	New ability to localize report folder names	The Manage Report Folders popup window within the Report screen now supports the ability to localize report folder names. The folder names can also be localized in the admin Translate System Messages and Prompts screen.
347063	New ability to localize Report Titles	Previously, only the report description could be localized. Now both the report title and description can be localized. In addition, the administration screen to

ExtraView 11.2.2 Release Notes  
Feature Enhancements

		perform localizations supports the localization of both the title and description of each report at a single place, to simplify the mass localization into a language of many reports at one time.
Count: 2 rows		

Module: Report Scheduler		
Issue #	Title	Release Note
347715	Setting of Next Run date within Scheduled Reports	The scheduled report screen now calculates and displays the next scheduled time, according to the selection you make in the frequency and other lists. This avoids any ambiguity when the user does not correctly anticipate what date/time the report will next run.
Count: 1 rows		

Module: Search / Report		
Issue #	Title	Release Note
350912	Runtime filters when outputting a report to PDF format	When the user's browser is set to download a PDF document, as opposed to open the document within the browser and runtime filters were specified for the report, the runtime filter popup will remain open, allowing the user to set different runtime filters and then rerun the report.
Count: 1 rows		

Module: User Custom		
Issue #	Title	Release Note
349007	New user custom exit for Allowed Values	A new user custom exit, ucAllowedValuesChanges, has been implemented to provide information to user custom code on changes to allowed value combinations.
Count: 1 rows		
Total Count: 9 rows		

ExtraView 11.2.2 Release Notes  
Fixed Bugs

Module: API & CLI			
Issue #	Found in Release	Title	Release Note
352011	11.0.3.1	Checkbox field problem when updating the field type via the API	When an API request set a checkbox field to a value of NO, and the same request was repeated, the database would contain a row with a null udf_list_id. There should not be any such rows in the database, following the request.
351853	11.2	Altered API call to incorporate the valid SSO parameter	The API sign on now sets the valid SSO flag to true if SSO correctly authenticates the user. This allows the API to leverage SSO.
351352	11.1.1	API could not add a document field through the API with the insert command, if the field name on the form was lower case	This has been fixed so that the document name is case-insensitive.
			Count: 3 rows

Module: Administration			
Issue #	Found in Release	Title	Release Note
352132	11.2.1	Pop-up List displays search alphabet vertically instead of horizontally	Within the popup for list and user fields, the drilldown alphabetic characters were displayed vertically rather than horizontally. This was a presentation issue only and there was no impact to functionality. The problem has been resolved so the display of the characters is horizontal, saving space within the popup.
351699	11.0.3.1	DEFAULT_START_PAGE using title values did not work	When the behavior setting DEFAULT_START_PAGE was set to a valid entry, this was not recognized when the administrator created a new user and the user's Start Page needed to be set manually. This has been fixed.
			Count: 2 rows

Module: Attachments			
Issue #	Found in Release	Title	Release Note
349116	11.1.1	Duplicate image thumbnails were being created in the database attachment table	This only became a problem when a user attempted to delete an entire issue, and the duplicate prevented the deletion from happening. This has been resolved.
			Count: 1 rows

Module: Business Rules			
Issue #	Found in Release	Title	Release Note

ExtraView 11.2.2 Release Notes  
Fixed Bugs

349680	11.2	Unable to use link rules to update a multi-select field across multiple child records	When a postupdate rule executed this, the existing values would be lost. These are now retained.
Count: 1 rows			

Module: Calendar			
Issue #	Found in Release	Title	Release Note
345675	11.0.3.2	Calendar report showed records by Day split across two days	This was due to an incorrect time zone calculation when handling DAY type fields. The expectation was that when the user set to "use a date field at a single point in time" that this would imply a single day. This has been fixed.
Count: 1 rows			

Module: Charts			
Issue #	Found in Release	Title	Release Note
351871	11.2.2	Date based control charts did not show selected excluded dates on chart when running a saved report.	This was a bug and has been fixed
Count: 1 rows			

Module: EVMail			
Issue #	Found in Release	Title	Release Note
351368	11.2.1	Japanese "from" address garbled when displayed as part of the EVMail body	This was a minor display bug and has been fixed.
Count: 1 rows			

Module: Escalation			
Issue #	Found in Release	Title	Release Note
351187	11.1	Escalation rules did not work correctly with business calendars	Escalation rules were not correctly selecting the data from calendars in order to determine exactly when the escalation should trigger. This has been fixed.
Count: 1 rows			

Module: Internationalization

ExtraView 11.2.2 Release Notes  
Fixed Bugs

Issue #	Found in Release	Title	Release Note
352196	11.2.2	Popup calendar for the Thai(Thailand) locale did not display correctly, even in English	This was a result of the localized strings for the calendar in the Thai language not being present. The code has been altered so that if localized strings for any language are not available in the calendar, then English will be displayed.
352179	11.2.2	Popup calendar did not display correctly for the Chinese(China) and Chinese(Taiwan) locales	The popup calendar for these locales did not contain the correct localized date information. This has been fixed
352141	11.2.2	Data Dictionary Help Text translation using the Admin utility	This was actually the correct behavior, but it was not possible to determine which strings were truly blank and to which fields they pertained. Now, the data dictionary field name is also displayed to provide a better context for which messages are truly blank
352120	11.2.2	Consistency in output of localization metadata	When exporting the output of localization metadata to spreadsheets, the data used slightly different (but correct) representations for the names and values of some of the fields, compared to browser output. The two outputs now provide consistent information.
352110	11.2.3	Localization screen displayed incorrect information	When using the "Localize" button from different fields within ExtraView, if there were more than a few languages available, the screen would sometimes show localized values for a locale, when none had been translated. The data in the database was correct, and this was a presentation issue only.
351623	11.1.0.1	UpgradeMessage failed to run on non-Oracle databases	The routine now works correctly on all supported databases
349323	11.2.1	The wrong list item could be translated, where there are duplicate values for an item	If there were 2 list values in the same user defined field list (not a recommended configuration), where the translation has been incorrectly done so that both values have the same localized value, when you tried to fix the duplicate, it fixed only the duplicate that was selected, not the alternate. This has been fixed.

Count: 7 rows

Module: Search / Report			
Issue #	Found in Release	Title	Release Note
352109	11.2	Editing a report and then doing a 'Save As' operation when the report had an uploaded Excel Template resulted in error	This has been fixed
351301	11.2.1	The "during" filter operator was using the Database time zone and not the user's time zone	This has been fixed
350537	11.1.0.1	Date Field Filter Issue on Browser Reports	This change forces the calendar widget to use the user's time zone whenever the user specifies that the time zone is part of their date format. Browser support of specific time zones varies from browser to browser -- FireFox has the most complete support. If a browser does not support the user's time zone, it falls back to

ExtraView 11.2.2 Release Notes  
Fixed Bugs

			previous behavior, with oddities due to the use of the browser's time zone for all internal date manipulations. It is recommended that the user uses a date format that contains time zone as part of the definition if the correct results for date filters are to be observed, when time zones are important
