

6.3.1.2 Release Notes

Prepared - 3/31/10 8:14 PM

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
182416	Feature Enhancement	N/A	EV Mail	EVMail -- DELIM_REGEX did not work	EVMail's new configuration setup had a section referring to DELIM_REGEX. This indicated that it had not yet been implemented. With this release, the functionality has been completed, allowing this section to be used to determine the pattern to search for within incoming emails. Text following the pattern in the regular expression will be discarded from the update. The purpose allows the original notification to be parsed and only the latest text to be used in the update of the issue.
185266	Product Bug	6.3.1.1	Add & Edit	Allowed values - Transport error with List & Radio button display type fields on Add screens	This issue occurred with parent allowed values on an add screen and corresponding child allowed values on repeating rows. With this configuration, and with the selection of a child field value on the repeating row, an ajax transport error would occur.
185372	Product Bug	6.3.1.1	Add & Edit	Improved performance of allowed value lists when one list contained a very large number of records	When a UDF list contained 50,000 plus entries, and was part of an allowed value list, retrieving the child records was rather slow. The performance of this operation has been improved significantly.
185454	Product Bug	6.3.1.1	Add & Edit	Fields values were cleared out after Ajax refresh of an embedded layout	The problem occurred when trying to perform an Ajax refresh on some fields and on an embedded sub-layout at the same time. When this was configured, the result of the Ajax refresh was that values within the sublayout were cleared. This has been fixed.
186365	Product Bug	6.2.3	Add & Edit	Ajax refresh problem with the inbuilt field named PRODUCT_NAME	Refresh rules that had fields dependent on the PRODUCT_NAME field would not work consistently. This was fixed.
183623	Product Bug	6.3.1.1	General code issues	Clicking "X" to close a modal window does not return to parent record in IE7	This bug was specific to IE 7 only. When using the "X" in the top right-hand corner of a modal popup, the close window operation did not return to the parent record. This was fixed.
185350	Product Bug	6.3.1.1	Rules Engine	Modal popup windows would freeze and become uneditable when an ERROR rule was triggered	A business rule that triggered the ERROR condition on the new modal popup edit or add screens would freeze the modal window when the error dialog appeared. This has been fixed.
185341	Product Bug	6.3.1.1	Search / Report	After upgrading to 6.3.1.1 not all reports were visible	This problem was related to the permission key SR_ALLOW_HIERARCHY. This prevented some reports being displayed on the Query screen. The issue was fixed so all reports should now be visible.
186297	Configuration Change	6.2.1.1	Database	Changed indexes on the security_user table	The indexes to the security_user table have been reworked to provide an increase in performance in accessing this frequently used table.
Count: 9 records
