6.4.1.1 Release Notes

Prepared - 7/19/10 12:42 PM

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
58980	Feature Enhancement	N/A	API & CLI	Request for Email parser for EVMail	Now implemented is a generic, non email client specific method to strip out old contents generated by the ExtraView mail notification program, when a user replies to this email and adds some new comments to the mail.
194892	Feature Enhancement	N/A	Interest Lists	Support for user id's containing @ signs, in interest lists	Previously, interest list designations could not contain an @ sign. This made life difficult if an email address was used as the User ID of an account. This has been enhanced so that @ signs may be used within Interest Lists.
194734	Feature Enhancement	N/A	User Custom	New custom exit implemented for Mass Update feature	A new user custom exit has been added to permit a user custom to filter the list of fields available for modification in the Mass Update utility. The method is named massUpdateSelectList, and it has the following parameters: - Connection to database - Current session - The list of dd names and titles that will be presented to the user - Flag indicating whether it is for a clone operation or a mass update operation The returned list must leave alone the first entry in the list, which is a dummy value. The ddnames in the list have already been checked for security permissions, so not all ddnames may be present
192476	Product Bug	6.3.1	API & CLI	Perl error in evget CLI command	CLI users of the evgetfields command could sometimes see: Newline in left-justified string for printf at ./evget line 234, <STDIN> line 2. This problem has been fixed.
192703	Product Bug	6.3.1.2	Add & Edit	ExtraView fails to handle Enter key attempts gracefully on Safari / Chrome / Firefox	ExtraView did not gracefully handle the use of the Enter key on Add / Edit screens in Safari / Firefox / Chrome browsers. We now catch the keycode and handle this appropriately.
194818	Product Bug	6.4	Administration	Password security issue with Adobe Flash plug-in	It was possible using the Adobe Flash plug-in to hijack an ExtraView session and then alter the password of a different user account. This is now impossible.
192583	Product Bug	6.3.1.1	Allowed Values	Problem with Allowed Values when parent is the AREA field	This only became an issue when upgrading an old 6.3 site to this version of code. The allowed values enhancements from that version introduced an incompatibility with allowed values where the AREA field was the parent. This has been fixed.

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
194720	Product Bug	6.4.1	Import and Export	After performing an XML export and importing the file a saved chart could not be run or edited	This occured when the XML export explicitly excluded reports from the export. The import incorrectly handled the absence of the reports and caused a problem with existing charts. This has been fixed.
194741	Product Bug	6.3.1.3	Import and Export	Using a date range to restrict the output of an xml export file created an improperly formatted XML file	The filter using a date range on the XML export was not working correctly and has been fixed.
194742	Product Bug	6.4	Import and Export	Metadata import problem with business areas	After performing an XML export of metadata, and importing the file, business areas in the export file were not visible to users as they had been in the source database. This was fixed.
192626	Product Bug	6.4.1	Layout Editor	Unable to copy a layout to a different business area within the Screen and Report Layout Editor	When an administrator attempted to save a layout to a different business area and project, they received an alert that they needed to provide a title and description for the layout, even though that was present. This was fixed.
194944	Product Bug	6.4.1	Notification	EVMail templates stopped working after upgrade to 6.4.1	This was fixed
193493	Product Bug	6.4.1	Sign On	With hybrid login, when LDAP login fails, user was able to login with invalid password	This was fixed.
Count: 13 records
