

## 6.4 Release Notes

Prepared - 4/4/10 9:50 PM

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
189304	Feature Enhancement	N/A	Allowed Values	Allowed Values enhancement to support 3 parent fields for a single child	This feature enhancement extends from 2 to 3, the number of parents that an individual child field may have in an allowed value relationship.
167402	Feature Enhancement	N/A	Attachments	Allow the attachment file description to be optional as opposed to always being required	The field ATTACH_FILE_DESC can now be configured on both the add and edit screens to be optional as opposed to always being required.
182416	Feature Enhancement	N/A	EV Mail	EVMail -- DELIM_REGEX did not work	EVMail's new configuration setup had a section referring to DELIM_REGEX. This indicated that it had not yet been implemented. With this release, the functionality has been completed, allowing this section to be used to determine the pattern to search for within incoming emails. Text following the pattern in the regular expression will be discarded from the update. The purpose allows the original notification to be parsed and only the latest text to be used in the update of the issue.
166199	Feature Enhancement	N/A	General code issues	New option to hide the ID field on all ExtraView screens	There is a new behavior setting named HIDE_ISSUE_ID that can be used to hide ExtraView's internal ID field on all screens.
166770	Feature Enhancement	N/A	General code issues	Improved error messages for ajax transport errors	Users had observed that Ajax transport errors were not clear to inexperienced users. The error messages have been improved to be more self-explanatory.
185385	Feature Enhancement	N/A	General code issues	The menubar at the top of the main frame will no longer scroll with the remainder of the main frame	This feature enhancement freezes the menubar buttons at the top of the main frame on the screen. This means that the buttons will always remain on the screen, providing improved usability in that the user will never need to scroll the screen to reach the menubar buttons.
182030	Feature Enhancement	N/A	Help system	Ability to control Help page size	The size of the help window that opens when a user clicks on the Help button in the navigation bar has been increased to just under 1000 pixels by 750 pixels.
167083	Feature Enhancement	N/A	Notification	Include selected attachments with email notifications	This new feature allows attachments selected with checkboxes to be mailed as part of a generated email notification. The feature is enabled with two new fields in the database, one to allow the selection of the individual attachments and one to control the overall addition of the attachments to the generated notification.
162357	Feature Enhancement	N/A	Search / Report	New mechanism to det default reports for new users	Each role may now have reports defined that are to be attached to new users who are created with that role. This is of value in installations where you want to set up new users who will all use the same Home Page reports when they first sign on.
167712	Feature Enhancement	N/A	Search / Report	Alteration to filtering with dates to allow partial days in filters	Previously, date filters could be created to provide a range of days. For example, the last 7 days could be expressed as \$\$\$SYSDATE\$\$-7 to \$\$\$SYSDATE\$\$\$. Only whole numbers could be used. This has been enhanced to allow partial days, using decimal figures.

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
181822	Feature Enhancement	N/A	Search / Report	Runtime filters with LDAP lookup set to YES when LDAP_PRIMARYKEY and LDAP_EMAIL are both "uid"	It is now supported to map the same LDAP schema name to multiple ExtraView configuration file properties, for example, you can set:  LDAP_PRIMARYKEY = uid LDAP_EMAIL = uid
189427	Feature Enhancement	N/A	Search / Report	Include the file name of any attachments on Excel (plain output) reports	This enhancement places the file name(s) of any attachment(s) on the output of a column report that has the ATTACHMENT field specified. If there are multiple attachments, then a delimited list of attachments is output.
165276	Product Bug	6.3.1	Add & Edit	Ajax Timeout occurred on edit screen after more than 10 seconds response times from the server	On large sites with many "visible if" or other dependencies on the ID field within an edit screen, there was a performance impact that would occasionally cause Ajax refresh timeouts. Given the value of the ID field never changed, a different technique was used to handle the logic, with a significant benefit to performance.
166347	Product Bug	6.3.1	Add & Edit	List of Ambiguous Names window generated JavaScript error when used with multi-value User fields	This was a bug that has been fixed
166713	Product Bug	6.3.1	Add & Edit	Copy and pasting text into an HTML area field did not save the pasted text with the record	If a user pasted text from a source external to the browser into an HTML Area field, then saved the record, the pasted text was not saved with the record. The bug has been fixed.
185266	Product Bug	6.3.1.1	Add & Edit	Allowed values - Transport error with List & Radio button display type fields on Add screens	This issue occurred with parent allowed values on an add screen and corresponding child allowed values on repeating rows. With this configuration, and with the selection of a child field value on the repeating row, an ajax transport error would occur.
185372	Product Bug	6.3.1.1	Add & Edit	Improved performance of allowed value lists when one list contained a very large number of records	When a UDF list contained 50,000 plus entries, and was part of an allowed value list, retrieving the child records was rather slow. The performance of this operation has been improved significantly.
185454	Product Bug	6.3.1.1	Add & Edit	Fields values were cleared out after Ajax refresh of an embedded layout	The problem occurred when trying to perform an Ajax refresh on some fields and on an embedded sub-layout at the same time. When this was configured, the result of the Ajax refresh was that values within the sublayout were cleared.  This has been fixed.
186365	Product Bug	6.2.3	Add & Edit	Ajax refresh problem with the inbuilt field named PRODUCT_NAME	Refresh rules that had fields dependent on the PRODUCT_NAME field would not work consistently. This was fixed.
186366	Product Bug	6.3.1.1	Add & Edit	Operations following an Ajax time-out bypassed required fields	If a user ignored an Ajax timeout condition and continued to update an issue, then required fields would be ignored. The length of time that the keyboard is locked while waiting for the return from an Ajax call to the server has been increased to eliminate this condition.
186369	Product Bug	6.3.1.1	Add & Edit	Hyperlink function in HTML Area field worked inconsistently	Within an HTML Area field, clicking on a hyperlink would not always initiate a link to the URL. This was a timing issue that has been fixed.

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
186395	Product Bug	6.3.1	Add & Edit	International characters with a european character set were lost in attachment file description	International european characters were lost within attachment descriptions and the attachment user information. This was an escaping problem that was fixed.
186246	Product Bug	6.3.1.1	Administration	Ability to change another user's password without Administration access was possible	If a user took the source to the Change User's password page and edited this with another user's details, they could submit the page and reset that user's password. This has been fixed so it's no longer possible to bypass the appropriate controls.
189207	Product Bug	6.3.1.1	Administration	The user's first name disappeared when it was read-only and an administrator updated the user's account information	This was a bug that only happened in the unusual configuration where the USER.FIRST_NAME field was set to read-only. This has been fixed.
181954	Product Bug	6.3.1.1	Home Page	Home page report sorting only worked for ascending order, but not for descending order	This problem was introduced in version 6.3.1.1 and has been solved so that Home Page report columns can be sorted in both ascending and descending orders.
183505	Product Bug	6.3.1	Import and Export	Default area/project values of the User performing file imports were not picked up when importing users where the area/project was not specified	When importing Users via the User Import functionality, new Users are not inheriting the Area/Project value of the User performing the Import. They were getting set to Area id=0, Project id=0 in the database. This was fixed so that the new users now take on the area and project of the current user, unless different values are specified.
185448	Product Bug	6.3.1.1	Import and Export	Single-area metadata export/import failed to bring across required security permissions and relationship groups	This has been fixed.
186351	Product Bug	6.3.1.1	Layout Rendering	"Update & Continue" button OnClick event no longer called "setState" JavaScript and as a result never called the "userJavaScriptUpdateBtn" user-custom JavaScript function	This was fixed so the JavaScript was called correctly.
186392	Product Bug	6.3.1.0.2	Layout Rendering	Fields with a display type of number appeared on _SEARCH layouts with a decimal display	This was purely a cosmetic issue where numbers would always appear with a decimal component on _SEARCH type layouts. This was fixed.
189432	Product Bug	6.2.3	Performance	Optimizes query in in reports to reduce the impact in the security_user table	In MySQL databases, a frequently used query within reporting ran slowly, causing a performance impact in busy sites with hundreds of users. The query has been optimized to remove the bottleneck it caused.
166793	Product Bug	N/A	Quickedit	The PR_RESOLUTION.QUICKEDIT_BUTTON security permission key only worked for the Global Area	Different permissions could not be set for other business areas and projects. This has been fixed.
181952	Product Bug	6.3.1.1	Quickedit	Quickedit on last row generated excessive white space on Home Page reports	This only occurred if the Home Page report used HTML Area fields and if the user used Quickedit to modify the last row of the report. This was only a cosmetic issue, but has been fixed.
186396	Product Bug	6.3.1.1	Quickedit	Quickedit sessions resized HTML Area fields once the Quickedit was complete	This caused the HTML Area field to re-display too wide and the user would have to scroll to see all its contents. This has been fixed.
189214	Product Bug	6.3.1.1	Quickedit	HTML Area field did not display properly in Internet Explorer 7 within Quickedit	This was an IE 7 bug only. The rendering of HTML Area fields within Quickedit sessions has now been altered to minimize this problem.
185350	Product Bug	6.3.1.1	Rules Engine	Modal popup windows would freeze and become uneditable when an ERROR rule was triggered	A business rule that triggered the ERROR condition on the new modal popup edit or add screens would freeze the modal window when the error dialog appeared. This has been fixed.

Issue #	Category	Found In Release	Module	Title	Release Note
189413	Product Bug	6.3.1.0.3	Rules Engine	Mixed licensing scheme affected email rules based on roles	This only affected sites which used a mixed licensing scheme was in effect. If there was an email rule that sent email to a specific user role, then only the users with a concurrent license would be added to the mailing list, and users with a named license would not be added to the mailing list. This was fixed.
189206	Product Bug	6.3.1.1	Search / Report	Users could create report folders that they could not delete	When using the Manage Report Folders button on the Query page, users with user roles that do not have access to save Public reports could create any number of folders in the Public Reports folder, but they could not delete them. This problem has been fixed.
183661	Product Bug	6.3.1.1	Zapatec	HTML Area field color picker problem when entering Red color values 080 thru 099	This was a minor problem with the color picker where red color values could not be entered directly. It was still possible to use the sliders and the color blocks to select colors.
186297	Configuration Change	6.2.1.1	Database	Changed indexes on the security_user table	The indexes to the security_user table have been reworked to provide an increase in performance in accessing this frequently used table.
Count: 39 records
