

6.5.1.4 Release Notes

Prepared - 3/18/11 9:24 PM

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
234627	Feature Enhancement	N/A	API & CLI	Heartbeat call has been extended to monitor tasks and provide memory details	A new option for EV_HEARTBEAT function shows the TASK information for the host node.
235690	Feature Enhancement	N/A	Performance	Provide automatic compression to all add and edit screens when serving them to client browsers	When the client browser indicates that it supports gzip compression, the server will compress all add and edit HTML pages before sending them to the client. This compression significantly improves performance, especially on slower connections or pages that have a very significant amount of content.
234944	Product Bug	6.5.1.2	API & CLI	Field level permissions were not being fully followed by the API update command	It was found that an API call that updated a field on a repeating row was able to do so without having write permission. This was fixed so that all fields properly obey the permissions set.
235076	Product Bug	6.5.1.2	API & CLI	insert_xml DTD problem	The DTD that handles the import of item data was found to be incorrect for handling AREA and PROJECT fields. The DTD has been fixed. The revised version is at http://docs.extraview.com/site/extraview-65/administration-guide/import/export/import-and-export/import-item-data .
234837	Product Bug	6.5.1.3	Add & Edit	Navigating related issues did not work past first level	On a site where there multiple related issue displays configured for relating records between different projects. The problem was observed when navigating between records at different levels with the Edit button or Add {child} button on related issue display layouts. The problem is that when clicking on the Edit or Add button on the related issue display, instead of going to the child screen, the user is taken back to the parent of the current record being edited. This was fixed.
235012	Product Bug	6.5.1.3	Escalation	Escalations were failing with a specific customer installation	A customer reported an exception when the escalation feature tried to update an issue. The escalations were failing due to the new repeating row capability added in version 6.5.1.3 and were subsequently trying to use an incorrect layout for the information for the update. This has been fixed.
234609	Product Bug	6.3.1	General code issues	Default colour for the CSS style groupHeading0 was too light with the images_light_blue color theme	The color has been darkened to provide more contrast
235117	Product Bug	6.5.1.2	General code issues	"Update Main" layout cell attribute configuration could cause an unnecessary warning	This required the setup of being able to display a child related issue record from its parent record, and also allowing the user to edit and delete the parent record from the child record. With this configuration, if the user drilled down from the parent to the child and then deleted the child, the software would return to the deleted parent and inform the user that the record could not be found with an alert. Now ExtraView does not generate the additional warning after return to the [now non-existent] parent record.

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
235451	Product Bug	6.5.1.3	LDAP	Null pointer occurred when using LDAP without LDAP_LOGINID	If the LOGIN_ID is not mapped in LDAP search, ExtraView will now use the USER_ID to avoid the null pointer. To be configured correctly, the LOGIN_ID should be mapped always.
235475	Product Bug	6.5.1.3	Mass Update	PROJECT field worked inconsistently in Business Rules during Mass Update	The business rules were not properly qualifying the PROJECT field when it was submitted without the AREA field. The rules should be able to accept either qualified or unqualified PROJECT entries. This was fixed.
235323	Product Bug	6.3	Perforce Integration	Perforce Integration had issue doing diffs on files with spaces in their names	This has been fixed.
234987	Product Bug	6.5.1.3	Relationships	Delete button click in Related Issue Display on parent add screen deleted all related records, not just the one marked for deletion	This has been fixed.
235304	Product Bug	6.5.1.2	Rules Engine	API updates used the current date/time instead of the date/time passed into the call	This occurred on an update to a repeating row record within the main record and there was a business rule that set a field on the repeating row to the value of sysdate. The software was incorrectly setting other repeating row records to the sysdate value. This has been fixed.
234939	Product Bug	6.5.1.2	Search / Report	Scheduled reports generated too many emails on some occasions	This occurred because ExtraView was checking the time on the application server as opposed to the database time to set the date/time of the last run. This could lead to minor discrepancies in calculating the time for the next run, and additional runs could be scheduled. This has been fixed.
235387	User Custom Code	6.5.1.3	Add & Edit	Accordion fold fields no longer worked if their initial setting was set to "COLLAPSE"	This problem was resolved.

Count: 15 records
