

6.5.1.7 Release Notes

Prepared - 6/1/11 2:38 PM

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
237090	Feature Enhancement	N/A	Administration	Retain a history of user passwords and not allow the same password to be reused by a user during any twelve-month period.	There is a new behavior setting named PASSWORD_REUSE_DAYS. This is the number of days before a password can be reused. The default value of zero disables checking for reused passwords.
236148	Feature Enhancement	N/A	Database	Longer values for the ALT_ID field	This has been increased from 30 to 128 characters
237044	Feature Enhancement	N/A	Import and Export	Ability to see more validation/import errors	The previous implementation was that only the first 50 errors were displayed in an import file. Now, the first 5,000 errors are displayed.
236162	Feature Enhancement	N/A	Notification	Batchmail improvement	Support for Image and Document field display types has been added to custom email templates. Now, when a custom email template is generated, any image or document field included generates the file name of the image or document as a substitute for the field tag, and the image or document is added as a file attachment to the outgoing email.
236990	Feature Enhancement	N/A	Notification	Users may now select a particular User ID as the "reply-to" or "from address" in email templates	This is an improvement and is controlled by the owner of the email template. Either the system defaults, specific users or the current user may be selected for both the reply to and the from address of outgoing ad hoc emails.
161458	Feature Enhancement	N/A	Rules Engine	More than 1 object rule is now supported in business rules	This was a previous limitation which was fixed. An unlimited number of object rule directives are now supported.
236700	Feature Enhancement	N/A	Search / Report	New feature provides aggregate functions on Rrelated Issue Displays	A new feature has been introduced, allowing the count, sum, average, minimum and maximums of fields within Related Issue Displays. This has been implemented with new layout cell attributes. See http://docs.extraview.com/site/extraview-65/administration-guide/layouts/calculations-related-issue-displays for full information.
237219	Feature Enhancement	N/A	Search / Report	Provided a means to store the report output type with each saved report	The report output type is now saved with each report. The default is to output to the browser, but if reset within the report editor, the output type will be remembered and used when the report is generated. There are two exceptions. If the report is placed on the Home Page, it will always use browser output, and if the report is scheduled, then the output type set in the scheduler will overwrite the selection within the report editor.
237231	Feature Enhancement	N/A	Search / Report	New ability to output Quicklist and Detailed Report results to any supported format	There is now a new button on the results page of both detailed reports and Quicklists. When the user clicks this, a sub-menu appears, and the user can select any valid output type such as Microsoft Excel or Adobe PDF, to output the results to that format.

Release Notes						
Issue #	Category	Found In Release	Module	Title	Release Note	
236304	Product Bug	6.4	API & CLI	It was possible to attempt to update a field via the CLI but there not be any warning or error message when the update failed	This was an obscure issue that only happened when fields were the grandchild, in a parent, child, grandchild relationship, and the parent value was not provided. Now, there is a warning under these circumstances so the user can correct and resubmit their command.	
237495	Product Bug	6.5.1.5	API & CLI	evupload CLI command would not accept the alternative User ID	The evupload command now accepts both the user's real User ID as well as their Alternative User ID.	
236260	Product Bug	6.5.1.5	Add & Edit	Site re-rendered all existing repeating rows within a layout, whenever a new row was added	This was unnecessary behavior. No problem occurred as a result of this, but the behavior has been modified to stop the happening.	
237082	Product Bug	6.5.1.5	Add & Edit	Tag cloud field did not work with Chrome browser	Although Chrome will not officially be supported until version 7.0, this problem has been fixed.	
237936	Product Bug	6.5.1.5	Attachments	When cloning an issue, attachments in the cloned issue were not cloned successfully	This was only a problem when utilizing attachments stored externally to the database, on the file system. This was a bug that has been fixed.	
236491	Product Bug	6.5.1.3	BatchMail	BatchMail failed and would not restart with Tasks & Thread Manager	An incorrectly generated email from the report scheduler caused the Batchmail to crash, and the process could not be restarted via the Task Manager, as the incorrect email was immediately encountered again, causing the same crash. The underlying cause where the report scheduler was able to generate an invalid email was fixed, and the Batchmail processing was improved so that it would not fail when encountering a similar issue.	
236454	Product Bug	6.5.1	General code issues	Removed invalid defaults from EVMail configuration starting points	This was simply a configuration error as opposed to a code error in the standard template site. Now the fields in the template configuration will map to real fields that exist.	
237318	Product Bug	6.5.1.6	General code issues	The layout cell attribute ADD_NEW, allowed duplicate values to be entered into a list	This only happened with User Defined Field lists where there was a layout cell attribute of ADD_NEW, allowing end users to add new values to lists. The problem has been resolved to ensure only unique values are entered and duplicates are rejected.	
237516	Product Bug	6.5.1.5	Home Page	Users cannot change "Account:" settings with their Alternative User ID	This has been fixed so that users may use either their real user ID or their alternative user ID.	
236445	Product Bug	6.5.1.3	Import and Export	Case Sensitive mapping setting did not work for same values of different capitalization	This has been fixed.	
236640	Product Bug	6.5.1.5	Import and Export	The metadata migration of Charts would not correctly migrate chart attributes	This has been fixed.	
237091	Product Bug	6.5.1.3	Import and Export	Map button took a long time to open popup window for large lists	The map button in question was on the file import screen. For very large lists this could take a long time to open the popup. This has been fixed.	
236557	Product Bug	6.5.1.5	Layout Rendering	Report Details color scheme made information unreadable	This was a cosmetic issue with the grey color schemes, when group headings were used on reports. The style sheet has been amended to resolve the issue.	
236711	Product Bug	6.5.1.5	Layout Rendering	 was displayed in the title of an embedded layout	This was a cosmetic issue which was fixed.	
236882	Product Bug	6.5.1.5	Layout Rendering	Repeating record issue with field definition in database	Some databases did not have the flag for multi-value set for the PROBLEM_RELEASE_ID field. This caused issues when updating repeating rows on edit screens. A patch has been applied to all databases to make sure this does not happen.	

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
236953	Product Bug	6.5.1.2	Layout Rendering	Related Issue Display did not reload when changing tabs within a layout	This problem occurred when multiple Related Issue Displays were configured under multiple tab values within an add / edit layout. This has been fixed.
237334	Product Bug	6.5.1.6	Relationships	Related Issue Display filters were not working as expected	When using the Related Issue Display filters to display only those related issues that were in a specific Business Area/Project the filter had no effect and showed all related issues. This was fixed.
236054	Product Bug	6.5.1.4	Rules Engine	Class cast exception with Link Rules	This was a bug which was fixed.
236311	Product Bug	6.5.1.5	Rules Engine	Link rule directives did not work with <Text field>=<List field> parameters	The mapping of text fields to list fields worked for onchange directives, but not when being used within link directives. This has been fixed.
237165	Product Bug	6.5.1.5	Rules Engine	Currency fields could not have symbols or thousands separators when used in rules calculation	This has been fixed.
236766	Product Bug	6.5.0.2	Search / Report	GO button on Query screen did not work reliably in Firefox, while using Standard query filters	This also required the REPORT_IN_NEW_WINDOW behavior setting to be set to YES. This was a problem introduced in 6.5.0.2 and has been fixed.
237383	Product Bug	6.5.1.5	Search / Report	HISTORY_RANGE_END filter with query did not return expected results	This was a problem that only affected some sites, but not others. The problem was data dependent, but has been resolved.
238197	Product Bug	6.5.1.5	Search / Report	Stacked bar charts did not show the date correctly on the X axis when run as a saved report	This was a minor bug that was fixed.
Count: 32 records
