6.5.1.8 Release Notes

Prepared - 6/17/11 12:07 PM

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
238292	Feature Enhancement	N/A	API & CLI	Allow server-side templates to be handled as text or HTML	When the API is handling a server-side template, it looks at the name of the stored template. If it eith HTML or HTM, then it is assumed that it is not a text document. This causes the API search and get commands to have escaping of the contents enabled, allowing the handling data within the templates such as true HTML or JavaScript. This is escaped as opposed to being rendered / executed.
237601	Feature Enhancement	N/A	Layout Rendering	New DRILLDOWN layout cell attribute for related issue display layouts	This new attribute allows fields that contain the ID as their value to be used to drill down to the underlying issue. This works on Related Issue Display layouts
161458	Feature Enhancement	N/A	Rules Engine	More than 1 object rule is now supported in business rules	This was a previous limitation which has been relaxed. An unlimited number of object rule directives are now supported.
