

## 6.6.1 Release Notes

Prepared - 10/27/11 10:34 AM

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
236601	Feature Enhancement	N/A	Search / Report	Prevent users from running queries with no specified filters	The MINIMUM_SEARCH_FIELDS behavior setting has been enhanced so that the administrator can control the end user behavior, in a way that they must always create a query with a minimum number of filters, reducing the likelihood that an end user can create a report that requires an inordinate amount of database resources.
239977	Product Bug	6.5.1.8	Add & Edit	Error in related issue display when a screen with more than 30 text fields was submitted	This was related to an earlier assumption that more than 30 text fields would not be submitted on a single form within a related issue display. This problem has been resolved.
239843	Product Bug	6.5.1.4	General code issues	RC1 session error fixed	<p>This error happened with an obscure operation as follows:</p> <ol style="list-style-type: none"> <li>1. Edit an issue with a related issue display (issue 1)</li> <li>2. Edit one of the related issue display issues from the related issue display on the edit page from 1 (issue 2)</li> <li>3. From the edit page in 2, edit another issue (issue 3)</li> <li>4. Close or update issue 2</li> <li>5. Wait about 30 seconds</li> <li>6. Hit history on issue 3</li> </ol> <p>The problem has been fixed.</p>
240011	Product Bug	6.5.1.5	Home Page	Default area/project was not set correctly when switching user role	<p>This was replicated as follows:</p> <ul style="list-style-type: none"> <li>- Define a role, R, that has only one area/project that can add issues</li> <li>- For some user with access to administrator and the role R, sign in as that user, and set the role to administrator</li> <li>- Choose an area/project that role R has no permissions for from the menu</li> <li>- Now choose role R from the menu</li> <li>- Try to open an Add screen.</li> </ul> <p>It should be permitted -- this would fail before</p>
239744	Product Bug	6.5.1.7	Search / Report	Invalid Number errors found in log	<p>No error was observed by users, but an "Invocation Target is:java.sql.SQLException: ORA-01722: invalid number" error was observed in the log. This was found to only occur on an Oracle database installation, with an allowed value relationship between the AREA field and a user defined field of type USER, both being placed on the SEARCH_QUICK layout.</p> <p>This has been fixed.</p>

Count: 5 records
