

6.6.3 Release Notes

Prepared - 10/27/11 10:47 AM

| Release Notes | | | | | |
|------------------|---------------------|------------------|---------------------|---|--|
| Issue # | Category | Found In Release | Module | Title | Release Note |
| 240305 | Feature Enhancement | N/A | Search / Report | Aggregate Function now performs the Calculated Expression in the Sub Total Column of the report | A new user custom exit named ucModifyAggregateTags supports this functionality, by providing a place where the expression can be inserted |
| 240565 | Product Bug | 6.6 | Business Rules | Electronic signatures using repeating rows were not elegantly handling 'Cancel' operation of REAUTHORIZE rule | This was fixed, so the cancel operation works correctly |
| 240452 | Product Bug | 6.5.1.9 | General code issues | Site lost its connection to the database, and did not recover | The likely root cause of this issue is the same as issue # 240678. A failure to commit a transaction to the table "user_globals" was causing a hang-up. This was fixed |
| 240678 | Product Bug | 6.5.1.5 | General code issues | System hung with increased service count, until Oracle timeout on the table "update user_globals" | This problem was extremely difficult to reproduce and required a very loaded system, and many users simultaneously running reports, as well as performing several administrative functions, all at the same time. What was discovered was that there was not a commit SQL statement on one operation to update the "user_globals" table and it is believed this was the source of the problem. |
| Count: 4 records | | | | | |
