6.6.4 Release Notes

Prepared - 4/26/12 11:04 AM

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
241600	Feature Enhancement	N/A	Allowed Values	Enabling a field that had allowed values but was disabled, will now re-enable the allowed list values that previously existed	Enabling a field that had allowed values but was then disabled, will now re-enable the allowed list values that previously existed when the field is enabled. Previously the allowed value entries had to be restored separately.
240411	Feature Enhancement	N/A	Search / Report	Quickedit now works with Document and Image fields that have dependencies	When DOCUMENT and IMAGE fields were used on reports with Quickedit, they did not support underlying dependencies such as "required if" when this was specified on the edit layout that supported the Quickedit. This has now been implemented.
241559	Feature Enhancement	N/A	Search / Report	Provided the ability to configure the number of decimal places outputted in subtotals row on reports	The data dictionary attribute REPORT_MAX_DECIMAL_DIGITS may be set to define how many digits will appear in the rendering of a NUMBER, DECIMAL, or CURRENCY field on reports. It does not affect how the field is rendered on ADD/EDIT forms. CURRENCY data types generally have the number of decimal digits defined by the currency type. E.g., the dollar has two decimal digits.
241676	Feature Enhancement	N/A	Web Services	Add XML only parm. to report call in web services to reduce the XML message size	A new call has been added to the query services, the call is EXACTLY the same as Execute Report, however there are fewer parameters in the request and response and the names are a little different:
240636	Feature Enhancement	N/A	XML Import and Export	File Import Templates are migrated with the XML Export / Import process	The uploaded files stored within the file import utility were not preserved for further use with the XML export / import process. A customer had a use case where they would reuse the same import file time and time again, so the XML export / import utility now handles the uploaded files for use with the file import utility.
241252	Product Bug	6.6	Add & Edit	Session expiry reported after a repeatable sequence of events	A customer reported a sequence of events that would result in their session being expired. The sequence was: 3) Sign on 4) Click Query 5) Run a hierarchical report 6) Drill-down on an issue into the Edit screen 7) Close the EDIT Browser Tab without taking any action 8) Close the Query Browser Tab 9) Enter the same issue number for the drilldown into navigation bar drilldown 10) EDIT that issue 11) The user is signed off and their session is expired This has been fixed.
241513	Product Bug	6.6	Add & Edit	Log Area fields did not retain formatting when used in an email template	When a MAIL rule action generated an email template, log area fields did not retain their formatting. This was fixed.
241495	Product Bug	6.6	Administration	'From User" did not work for email templates	This was fixed.

Release Notes

Issue #	Category	Found In Release	Module	Title	Release Note
241392	Product Bug	6.5.1.3	Attachments	Issue was not accessible after attaching screenshot from PC Linux OS	This happened when the user uploaded an invalid png file that ExtraView could not process. We have put in additional checking to make sure that problems with invalid image files do not cause a problem.
240659	Product Bug	6.6.1	Business Rules	ADD ROW: directive for Repeating Rows did not work on REFRESH	This has been fixed
241111	Product Bug	6.5.1.8	Business Rules	Relationship group link generated a "Relationship Group name null not defined" error	This was due to using a data dictionary name to define a relationship group within the business rules to define the link, which was not supported. Now, you may use this combination.
241514	Product Bug	6.6.1	Business Rules	Assigning a decimal field to a currency field in a business rule prevented an update	This happened when either of the numbers was a negative number. This has been fixed.
233392	Product Bug	6.5.1.3	Layout Rendering	Duplicate related issue display layouts were rendered on Edit screen with selected tabbed layouts	This was a coding error and has been fixed.
241504	Product Bug	6.6	Performance	Improved performance for mass update and file import operations	Several code optimizations have been implemented
241669	Product Bug	6.6	Quickedit	Timeout messages sometimes occured during QuickEdit	This was happening on a very busy and very compex site. The priority of handling Ajax requests has been increased to counteract this problem.
241688	Product Bug	6.5.1.8	Sign On	Unauthorized Access Attempts functionality was not working	The email to advise an administrator that a user was repeatedly attempting to sign in unsuccessfully was not being sent. This was fixed.
240684	Product Bug	6.5.1.8	XML Import and Export	Unable to perform XML export on a site	A patch in a previous upgrade had failed to run against the database. This caused problems with the XML export utility. The problem has been fixed.
