

7.0.12 Release Notes

Prepared - 1/15/13 10:34 AM

| Release Notes | | | | | |
|---------------|---------------------|------------------|---------------|---|--|
| Issue # | Category | Found In Release | Module | Title | Release Note |
| 264725 | Feature Enhancement | N/A | Database | New command line utility to check aliased list consistency | This tool will report and optionally fix any aliased lists in the database that are not consistent. Aliased lists consist of an original list which can be edited by the GUI and one or more alias lists that should be identical. If alias lists are found to be different than the original list, they are reported as different. |
| 264087 | Feature Enhancement | N/A | Notification | Email notification settings may be set by Business Area and Project | The behavior settings for AD_HOC_EMAIL_FROM_ADDRESS, AD_HOC_EMAIL_FROM_SENDER, EMAIL_ADMINISTRATOR_NAME, EMAIL_ADMINISTRATOR_USER_ID, EMAIL_FROM_USER_ID, and EMAIL_FROM_USER_NAME may now be set for any Business Area and Project, overriding the global settings on the behavior settings screen. |
| 264043 | Feature Enhancement | N/A | Relationships | Fields with Relationship group attributes auto-populate | There is a new optional layout cell attribute named RID OMIT AUTO POPULATE. This field may be applied to a text or text area field that is used with the layout cell attributes RID RELATIONSHIP NAME and RID RELATION TYPE. Under normal operation without this new layout cell attribute, the text or text area field is normally populated automatically by the relationship group with the ID of the related issue. Under some circumstances, this is not desired, and the RID OMIT AUTO POPULATE prevents the retention of the related issue ID when the main issue is updated. |

|---------------|---------------------|------------------|----------------------|---|---|
| Issue # | Category | Found In Release | Module | Title | Release Note |
| 265302 | Feature Enhancement | N/A | Search / Report | Quickfind keyword search now supports phrase searching | Keyword searching with Quickfind now supports the ability to find phrases. The phrase you are searching for should be placed in quotation marks. For example, enter "operating system" to search for the entire string within your issues. Also, issue IDs within your text are now indexed, as well as email addresses. |
| 264853 | Feature Enhancement | N/A | User Custom | New user custom exit named ucFilterPopup for pop-up list fields | This new user custom exit is the counter part of ucRenderListValues for list fields. |
| 263924 | Product Bug | 7.0.11 | Add & Edit | Alignment of Document fields in multiple repeating row layouts of different types | When document fields from multiple repeating row layouts with different layout types are placed horizontally on an embedded layout, they would previously be "mis-aligned", given that ExtraView would place them on successive rows, one for each repeating row. A new layout cell attribute named COLLAPSE REPEATING ROWS will align all the data horizontally from the different repeating rows. |
| 263802 | Product Bug | 7.0.11 | Business Rules | LINK business rule did not work always after upgrade to version 7.0.11 | This bug was introduced into 7.0.11 and has been fixed. |
| 264704 | Product Bug | 7.0.5 | Business Rules | Business rule worked on ADD screen but not EDIT screen | The root cause of this bug was an unusual configuration combining a "visible if" layout cell attribute on an embedded layout where a particular numeric field that was the result of a calculation in business rules resided, but the fields used in the calculation were not embedded in the same layout. This has been fixed. |
| 260055 | Product Bug | 7.0.9 | Perforce Integration | Error with SEND_EMAIL setting | The value for the SEND_EMAIL setting was case sensitive as opposed to case insensitive. This has been fixed. |

|---------------|-------------|------------------|-----------------------|--|--|
| Issue # | Category | Found In Release | Module | Title | Release Note |
| 263019 | Product Bug | 6.6.5 | Quickedit | QuickEdit triggered refresh business rule on text area field | This problem only occurred with IE8 as the user's browser. The cause was a difference in how IE8 handles CR/LF within text area fields when the field was originally populated from a browser on a different operating system, and how the browser changed the CR/LF combination. We now look for this and compensate, so the field does not appear changed to the business rule processor. |
| 261129 | Product Bug | 6.6.3 | Search / Report | Planning report did not compute calendar date differences correctly in all cases | This problem only occurred when two dates involved in a calculation were on either side of the transition from daylight savings time to standard time and vice versa. The problem has been fixed. |
| 264477 | Product Bug | 7.0.10 | Search / Report | Column Report not displaying field values in some cases | This was a complex and obscure problem. It only involved installations utilizing LDAP servers, and where the user's Alternative User ID was different than their User ID. In this case, the database was incorrectly using the Alternative User ID to record the change as opposed to using the real User ID. This has been fixed, and the update includes a script to search for and correct any data that was incorrect. |
| 265298 | Product Bug | 7.0.11 | XML Import and Export | Metadata export task did not update task table | This problem resulted from an installation having multiple import tasks running, as opposed to there only being a single import task running. Changes have been made to prevent this happening. |
