

7.0.14 Release Notes

Prepared - 3/21/13 11:00 PM

Release Notes						
Issue #	Category	Found In Release	Module	Title		Release Note
274104	Feature Enhancement	N/A	Add & Edit	Not Required If layout cell attributes now work with multi-valued fields		This is a new feature to enhance the available logic for configuring complex sites
274443	Feature Enhancement	N/A	Add & Edit	Improved performance for AJAX refresh calls on add / edit layouts		The handling of very large, complex layouts has been improved by rewriting some of the Ajax processing to handle embedded layouts and "visible if" elements more efficiently.
273894	Feature Enhancement	N/A	EV Mail	Increased limit on text area fields being processed with EVMail		There was a previous limitation on the size of text area fields within ExtraView (32k). EVMail would therefore not allow more than this number of characters to be processed. Now, text area fields can be of any size, so the limit on incoming text fields has been enlarged to 512k.
273051	Feature Enhancement	N/A	General code issues	New ability to download the most recent saved PDF template from within the PDFmapping utility		Within the PDF Mapping Utility, we now store the original PDF before it is processed, so the user can view this at any time, without retaining their original copy
273115	Feature Enhancement	N/A	Notification	New support for TLS with SMTPS		The BatchMail task can now be configured to use TLS with SMTPS
231803	Feature Enhancement	N/A	Search / Report	New ability to choose whether or not to display parent issues on a hierarchical report when there are no children		This ability enhances reporting hierarchies. Previously the parent records were suppressed when there were no child records. Now, this is an option in the report editor, so the user has the choice of whether to display parents when there are no children.
272906	Feature Enhancement	N/A	Search / Report	Ability to export text field values with leading zeroes to Excel and for zeroes to be displayed instead of cutting them off		This prevents Excel from removing leading zeros on numeric fields.
273263	Product Bug	7.0.13	Add & Edit	Invalid dates were sometimes accepted		The rules for handling date input did not correctly interpret a user's locale, which sometimes led dates to be validated incorrectly. This has been fixed.

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
272724	Product Bug	7.0.8	BatchMail	BatchMail logs shows repeated attempts every 5 seconds to send an email prefixed with 4 underscores	This error was repeated in the log file, after a genuine failure to send an email. The error should only have been generated once. The problem was fixed.
274083	Product Bug	7.0.12	BatchMail	BatchMail task would not retry after encountering an error	There is now a new parameter named "check_connect_pause" in the BatchMail task. This is the number of seconds to wait before timing out, waiting for a response from the mail server -- it is only used when the connection has failed and batchmail is trying to restart. This gives the task a better chance of restarting successfully after there was a problem with the mail server or connection to the mail server.
273749	Product Bug	7.0.13	Charts	Drilldowns from chart on PROJECT field not working and caused session expiry	The root cause for this issue was the use of the PROJECT field in conjunction with the AREA field. The delimiter between the two caused a problem for the charting module. The problem was resolved.
274081	Product Bug	N/A	Database	When Daylight Savings Time began, times were off by one hour on a system where users spanned a number of time zones	This proved to be an Oracle problem, not an ExtraView problem. The combination of the Oracle 11.2.0.3 JDBC driver with the 9.2.0.8 Oracle database exhibited the problem. An older JDBC driver from 11.1.0.7 was put in place and the problem was resolved. Oracle has been informed of the problem.
274117	Product Bug	7.0.12	Database	History showed double entries for some fields after an export and import on a MySQL dataase	The import process had an incorrect trigger, causing some record types to be updated once by the import process and once by ExtraView believing a record was being inserted as a new record. This has been rectified so the trigger is only enabled after all the import is complete.
273217	Product Bug	7.0.12	File Import (GUI)	Customer had errors when performing a User File Import	This was traced to a problem in the length of a field value within the import file. This was fixed.

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
250481	Product Bug	6.6.3	Layout Rendering	Embedded report layout did not display values	When a detailed report layout contained an embedded layout, there were occasions when the field labels would appear on the report, but no values would appear against the labels. This has been fixed.
273125	Product Bug	6.6.3	Relationships	Related Issue Display error in Firefox 19.0	Mozilla introduced a bug into Firefox version 19. This affected related issue displays and searching for users in the user popup dialog. We have introduced a workaround to the problem in version 7.0.14. Patches for other versions can be obtained from ExtraView Support.
273144	Product Bug	7.0.13	Relationships	"THERE IS AN ERROR" seen within a Related Issue Display	This was observed after a mis-configuration on a site. The error template that should have been displayed to give a neat error message was missing. The template is now in place.
272609	Product Bug	7.0.13	Search / Report	Blank HTML Area fields not suppressed on Detailed report	With the behavior setting named REPORT_SUPPRESS_BLANK_LINES being set to YES, when HTML Area fields were placed on a complete row of a detailed report, the row title should have been suppressed when the field value was null. This was not happening. The problem has been fixed.
272624	Product Bug	7.0.13	Search / Report	Planning Report dependency pop-up window displayed the wrong fields	This was corrected, so the correct fields will now appear within the dependency popup field.
273467	Product Bug	8.0	Search / Report	The help tip provided on the field lists within reports was truncated unnecessarily	This was only evident on very long field titles, where the title was truncated to 50 characters. The full 100 characters is not available on tooltips
274028	Product Bug	7.0.12	Search / Report	Issue with Scheduled Report displaying different results than when the report was sent directly to a browser	This only affected charts which used a subset of the "selected values to chart" field. On occasions, the wrong values were being interpreted by the report scheduler. The problem has been fixed.

Issue #	Category	Found In Release	Module	Title	Release Note
274194	Product Bug	7.0.11	XML Import and Export	Metadata Export failed	It was found on this one site that there was a missing constraint on the database. Although it does not appear that this is a problem in other sites, the constraint has been added again to all databases with this release, to prevent this occurring on any other site.
