

7.0.2 Release Notes

Prepared - 12/30/11 4:36 PM

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
243344	Feature Enhancement	N/A	Add & Edit	Implement the "Update Main" layout cell attribute on Add Screens	This functionality now allows the layout cell attribute "Update Main" to be set when adding related issues from an add screen. This also allows for the definition of the ONCLICK_JS data dictionary attribute to control the behavior of the popup that is used to add the related issue.
242551	Feature Enhancement	N/A	EV Mail	Provide access to the CC recipient list	There is a new EVMail configuration property named EVMAIL_CC_UDF. This can be set to the name of a user defined field. When this is done, the CC notification list is added to this field.
243246	Feature Enhancement	N/A	Relationships	Automatically set the size of popup modal add / edit screens once they have rendered	When a popup window to add or edit an issue is rendered, it always defaulted to a standard size. This was sometimes too small for some layouts, meaning the user needed to resize or scroll around the popup window. Now, the popup is automatically resized to display its full contents, unless the containing browser window is not large enough for the contents.
242832	Feature Enhancement	N/A	Search / Report	Allow sorting of results on hierarchical report results in a browser	Previously, only the parent level fields on a report using hierarchies were sortable. Now, all levels of hierarchies on a report can be sorted in the usual manner by clicking on the title
243042	Feature Enhancement	N/A	Search / Report	New ability to apply the same runtime filter value entered for one "or" condition, to other filters with the same field in the query that also use the same runtime filter	If a complex query was performed using runtime filters, and the query used the same filter field and filter value multiple times, separated by "or" conditions, it was time consuming to provide the same runtime filter value multiple times. There is a new mechanism that allows the runtime filter values for this type of query to be entered only once, and ExtraView will then automatically populate all the other filter fields that are the same.
243694	Product Bug	6.2	Database	After applying a hybrid license, administrator could not see the checkbox to specify concurrent versus named user	This was a bug with a simple workaround. The bug has been fixed.
243211	Product Bug	6.6.5	LDAP	LDAP authentication returned "true" but authentication failed	This happened in a site with the Hybrid licensing scheme upgrading from version 6.6.5. The problem has been fixed.
240831	Product Bug	7.0	Layout Editor	Occasional lock ups in the Design Center with Internet Explorer	This problem was extremely difficult to reproduce. The lock up happened very infrequently, usually after many hours of work within the Design Center. The problem was eventually identified as a limitation of Internet Explorer only handling two connections to the server at a single instant. After five minutes, Internet Explorer would release the lock and normal operations would resume. We have worked around the problem to resolve.
243404	Product Bug	7.0.1	Layout Rendering	The UPDATE_MAIN_ISSUE layout cell attribute on Edit buttons of a Related Issue Display failed after a sort operation	This was a bug that was fixed.

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
243041	Product Bug	6.6.1	Search / Report	Incorrect Originator and Owner values would occasionally appear on Home Page reports	This problem was seen on a single customer site, but could potentially happen on other sites. The root cause was traced to different server sessions sharing cached information from queries. This has been fixed.
242797	Product Bug	6.6.4	User Custom	Average Subtotals give different results between browser and Excel output	The Excel output for average was not being computed correctly. This has been fixed.
Count: 11 records
