

## 7.0.7 Release Notes

Prepared - 8/19/12 9:59 AM

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
248567	Feature Enhancement	N/A	General code issues	New migration tool to extract documents out of the database and onto the file system	<p>This is a new, stand-alone program named DocumentImageMigration. It will typically be run with the support of doDocumentMigration.bat or doDocumentMigration.sh. Database patches must be run with patchrunner when DocumentImageMigration has completed its work. the program disables the database triggers when it is running, so as not to create history entries for the updates it makes.</p> <p>For most migrations only the -migrate option needs to be performed. The size columns will already be set in the database.</p>
257085	Product Bug	7.0.4	Administration	Email address validation when updating a user account	It was found that entering an email address into the user accounts screen, when the address contained a mixture of upper and lower case characters was not allowed. This has been changed so that the check is case-insensitive.
257182	Product Bug	7.0.5	Attachments	Document migration from database to file system reported a large number of warnings in the log	The log reported a large number of warnings when extracting the document and image fields from a database to the external file system. These warnings have been suppressed as there is no underlying error condition.
254404	Product Bug	7.0.4	Database	Errors seen in log when upgrading a large database	This happened on a large database where MULTI_LOCALE was set to YES. A part of the upgrade script that "cleaned" the multi-locale titles and removed duplicates was not working correctly. This has been fixed.
254560	Product Bug	6.6.6	History	Display of the history of document and image fields on repeating rows was not correct	This was only an issue when ABBREVIATED_HISTORY=YES and the permission settings for PR_RESOLUTION.RELEASE was not set to be able to read the field. This has been fixed.
