

7.0.9 Release Notes

Prepared - 9/18/12 10:46 PM

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
258712	Feature Enhancement	N/A	EV Mail	Additional escaping of special characters when issues are parsed by EVMail	Not all special characters such as ampersands and quotes were being escaped appropriately when incoming emails were parsed by EVMail. This has been fixed.
258710	Product Bug	7.0.4	Business Rules	When business rules used the ADD action to add a new issue, two issues were added	In the customer's configuration there was some custom code which, when executed due to a refresh, caused the rules to run. The rules also ran upon the same refresh directive. Logic has been built into the rules to recognize this situation and to only run the rules once.
259288	Product Bug	7.0.8	LDAP	LDAP authentication broke in version 7.0.8	An error was inadvertently introduced into 7.0.8 whereby the LDAP authentication was not completed correctly. This was fixed.
258653	Product Bug	7.0.4	Search / Report	Field value did not always display on Detailed reports	This was found to happen in rare circumstances when there was an open Add screen pointing to one area / project, but the issue being displayed in the Detailed report was in a different area / project. Now, the Detailed report show its values based on the default area / project, not the area / project of the open Add screen.
259102	Product Bug	7.0.6	Search / Report	Error in runing charts with advanced filters as a scheduled report	This was fixed.
