

8.0.2 Release Notes

Prepared - 10/2/13 9:47 PM

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
278348	Feature Enhancement	N/A	Add & Edit	Multi-valued fields using the SORT_SELECTED_VALUES behavior setting only refresh on the update of the issue	Previously, multi-valued fields using this behavior setting refreshed automatically, after each user selection. Now, the sort order of the list is only updated when the user is updated, preventing the user's cursor position within the field being updated on each mouse click.;
266307	Feature Enhancement	N/A	Administration	Even as an administrator, you must now have either read or write permission to a field to see it in the data dictionary and list manager	Previously all administrative roles could see all fields in the data dictionary and the list manager, irrespective of the permissions on the field. Now the specific administrative role must have permission to see or write to the area and project to which the field belongs, before they can see the field. This is of importance within multi-tenanted sites with more than one administrative role.;
276582	Feature Enhancement	N/A	Administration	New ability to have a different navigation bar for each user role within the system	This major feature allows any number of navigation bars to be configured. Each entry on the various navigation bars may be configured to select any one of a number of functions, including setting up sub-menus with more options.;
279453	Feature Enhancement	N/A	Database	New option to encrypt the properties within the Configuration.properties file	This has been developed primarily to allow the encryption of the database password within the Configuration.properties file. Set ENCRYPT_PROPERTIES=YES to enable the capability of encrypting property values. Then use the form <property-name> = ENC(encrypted-value) to encrypt any value, A program is provided to encrypt the values.;
282186	Feature Enhancement	N/A	File Import (GUI)	The File Import Utility has been extended to support file attachment imports	File attachments may now be imported using the File Import Utility, in a similar manner to how document fields are imported.;

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
283120	Feature Enhancement	N/A	File Import (GUI)	Ability to output excel spreadsheet of file import template following Validation which includes all rows & any errors that are found during validation	This new feature allows the markup of import data so that it is easier to resolve errors in the import file, and then resubmit the import file.;
281994	Feature Enhancement	N/A	General code issues	"www." within the text of issues now signifies the beginning of a link	Previously, only text within text fields that begun with "http://" was considered as the start of a link. The software now considers text that begins with "www." to also signify the beginning of a link.;
282352	Feature Enhancement	N/A	LDAP	LDAP synchronization improvements	The LDAP_SYNCHRONIZE task is now configured using a properties file. The configuration file identifies the logging parameters and log location, as well as the schedule for executing the synchronization of LDAP to the SECURITY_USER table.;
281203	Feature Enhancement	N/A	Quickfind	Display information for each type of object being indexed on the Quickfind administration screen	The Quickfind administration screen now displays how many objects of each type are still to be indexed.;
280717	Feature Enhancement	N/A	Search / Report	Change to format of fields output to Microsoft Excel reports	A new behavior setting named EXCEL_PRESERVE_LEADING_ZEROS has been introduced. This allows the spreadsheet to retain leading zeroes output. For example, if the setting is NO, then when 0001234 is output, the Excel cell will display 1234. If the setting is YES, then the Excel cell will display text as 0001234.;
280937	Feature Enhancement	N/A	Search / Report	Excel templates now support .xlsm files (Excel with macros)	This is new functionality, supporting Microsoft Excel .xlsm files;
282064	Feature Enhancement	N/A	User Interface Issues	New "flat grey" color theme added	A new color theme that offers a set of flat grey colors has been added to the user interface themes.;
282366	Feature Enhancement	N/A	User Interface Issues	Improve presentation of related issue displays	The rendering of related issue displays has been improved, with a thin separator between each record.;

Release Notes						
Issue #	Category	Found In Release	Module	Title		Release Note
247182	Product Bug	7.0.3	Add & Edit	The LABEL_WRAP_POSITION behavior setting was used even when ALT_TITLE was defined		The specification for the ALT_TITLE layout cell attribute is that it should override any other formatting of the cell title. The LABEL_WRAP_POSITION was taking precedence over the ALT_TITLE for formatting. This has been fixed.;
283531	Product Bug	8.0.1	Add & Edit	Radio button display type fields were not checked for requiredness, when using the field as a field pushed down to a modal popup add window		This problem only affected radio buttons on a parent Add or Edit screen. If these were required, and were "pushed down" into a popup modal add window, they were not checked for requiredness. This has been fixed.;
281734	Product Bug	7.0.10	Administration	Error occurred after exporting and importing metadata, caused by a default value on a disabled field		The ExtraView code has been altered to not allow the deletion or disabling of a User Defined list field value if it used as a default value in either a list or an alias of the master list. This will prevent the error seeing during export and import of the metadata.;
282513	Product Bug	7.0.14	Administration	Password Expiration was not working as expected		This was actually working, but the GUI was misleading. Now the GUI has a specific radio button option offering an option to the administrator to expire the user's password;
282493	Product Bug	8.0.1	Business Rules	Null Pointer Exception occurred when referencing a Link Directive within an email rule		An email directive rule similar to: <pre> if (AREA="Bugs" && STATUS="Submitted" && SCREEN_NAME="ADD") {(IACRtoIRLink).ASSIGNED_TO; }; <== link IACRtoIRLink ==> AREA="Issue", ID=ALT_ID </pre> caused an exception. This has been fixed.;
281341	Product Bug	7.0.10	File Import (GUI)	Behavior setting OMITTED_USER_IMPORT_COLUMNS has been improved		There was a problem with the implementation in that the user's home page reports were not always mapped correctly. This has been fixed.;
283583	Product Bug	8.0.1	File Import (GUI)	Error observed when importing text area fields from the File Import Utility, when a text field was greater than 32,000 characters		It is possible to create values this large in a CSV file, so the size limit for text area fields being imported has been extended to 100,000 characters;

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
273699	Product Bug	7.0.13	General code issues	New data dictionary fields did not always propagate across all nodes in a clustered installation	This was an obscure problem which only happened intermittently. This has been fixed.;
281202	Product Bug	7.0.15	General code issues	Users are able to see information from a site by using a URL that includes someone else's session information	This was an unusual circumstance, where the Google indexer managed to index an active page from an ExtraView server. This allowed another user who saw a search result with this page to see some information from a site other than their own. Pages now include a meta tag to direct search engines not to index the page.;
281823	Product Bug	7.0.15	General code issues	Shortcut Home Page report button text can be changed	It was possible to select and alter the text on a Home Page shortcut button. This had no effect on usability or functionality, but the button text cannot be altered any longer.;
282147	Product Bug	6.6.3	General code issues	An upgrade to a site deleted customer inserted metadata translations for non-English languages	This occurred only to metadata messages created by the customer in non-English locales. The problem was fixed so that these messages are now kept intact upon executing the upgrade process.;
282425	Product Bug	8.0.1	General code issues	Google has changed the API for their language translation product	With the Google Translate API version 2, the method of calling the service has changed. ExtraView provides a UserJavaScript method to provide access to this service and this has been updated. Note that the Google Translate API is no longer a free Google service, and users of the API must pay Google directly to use this service.;
283658	Product Bug	8.0.1	General code issues	Path names to JavaScript in Workspace did not work on every server	There was a minor error in the path names to the JavaScript files within the workspace. On one customer's site, this resulted in an error. The path has been created.;
281803	Product Bug	7.0.15	Layout Rendering	Error was observed when a field on an embedded layout was not visible for a user role	This only occurred if the embedded layout contained a repeating row, the first column was blank without a cell and the last column was not visible. The problem has been fixed.;

Release Notes					
Issue #	Category	Found In Release	Module	Title	Release Note
282035	Product Bug	8.0	Layout Rendering	Customer had configured a check box such that it could not ever be checked	This occurred when the administrator added a sort sequence on the values of checked and unchecked for a checkbox display type field. Administrators may no longer alter the sort sequence for checkbox fields.;
282490	Product Bug	7.0.15	Perforce Integration	Perforce integration failed to update ExtraView records due to a problem with the RELEASE_STATUS field	This issue was caused by a bug in the ExtraView API that is used by the P4 integration daemon to update the RELEASE_STATUS field to a new value. The update was clearing the value of the RELEASE_STATUS field. This has been fixed.;
281289	Product Bug	7.0.5	Search / Report	Historic data filter threw "single row subquery returns more than one row error"	This was an obscure problem where there were multiple issues with absolutely identical timestamps of being updated. This has been fixed.;
283766	Product Bug	8.0.1	Sign On	SSO connections could not be made with latest release	A change to the way in which session cookies were handled caused SSO connections to not work with 8.0.1. This has been fixed.;
282179	Product Bug	7.0.2	User Custom	Multiple, different custom reports could not be run in the same session without causing a session expiry	This problem has been fixed.;
Count: 32 records
